## 1. Define the following terms

The student must begin the answer with the definition as given. The student must also include a drawing illustrating the definition. The student must also include a drawing illustrating the definition. The student must also include a drawing illustrating the definition.

### a. Bight

The term bight refers to any curved section, slack part, or loop between the two ends of a rope.

### b. Running end

Also called the working end, it is the free end of the rope. This is the end of the rope in which a knot is being tied.

### c. Standing part

The part of the rope between the Running end and the Standing end (the end that doesn't move, think of it as if someone is holding it)

### d. Underhand loop

A loop formed by passing the running end of a line under the standing part.

### e. Overhand loop

A loop formed by passing the running end of a line over the standing part.

### f. Turn

1. Turn  
2. Underhand loop  
3. Overhand loop

A **turn** is a component of a knot. Turns can be made around objects, through rings, or around the standing part of the rope itself. Turns come in various forms, distinguished by the number of passes that the rope makes. A turn or **single turn** requires one pass. The line makes a U-shape through or around the object, or half a revolution. A **round turn** requires two passes and makes one and a half revolutions. **Two round turns** adds another pass and revolution.

### g. Bend

A bend is used to tie two ropes together, as in the Sheetbend. Technically, even the Reef knot is a bend

### h. Hitch

A hitch is used to tie a rope to a spar, ring or post, such as the Clove hitch. Hitches can also be used to tie one rope ONTO another rope, as in the Rolling hitch.

### i. Splice

A knot formed by interweaving strands of rope rather than whole lines. More time consuming but usually stronger than simple knots.

### j. Whipping

A binding knot used to prevent another line from fray.
