Challenging Pregnancy Genevieve Grabman,2022-03-01 In Challenging Pregnancy Genevieve Grabman recounts being pregnant with identical twins whose circulatory systems were connected in a rare condition called twin to twin transfusion syndrome Doctors couldn't unfuse the fetuses because one twin also had several other confounding problems selective intrauterine growth restriction a two vessel umbilical cord a marginal cord insertion and possibly a parasitic triplet Ultimately national anti abortion politics not medicine or her own choices determined the outcome of Grabman's pregnancy At every juncture anti abortion politics limited the care available to her the doctors and hospitals willing to treat her the tools doctors could use and the words her doctors could say Although she asked for aggressive treatment to save at least one baby hospital ethics boards blocked all able doctors from helping her Challenging Pregnancy is about Grabman's harrowing pregnancy and the science and politics of maternal healthcare in the United States where every person must self advocate for the desired outcome of their own pregnancy *Extending Medicare Reimbursement in Clinical Trials* Institute of Medicine,Committee on Routine Patient Care Costs in Clinical Trials for Medicare Beneficiaries,2000-03-17 Increasingly over the past five years uncertainty about reimbursement for routine patient care has been suspected as contributing to problems enrolling people in clinical trials Clinical trial investigators cannot guarantee that Medicare will pay for the care required and they must disclose this uncertainty to potential participants during the informed consent process Since Medicare does not routinely preauthorize care as do many commercial insurers the uncertainty cannot be dispelled in advance Thus patients considering whether to enter trials must assume that they may have to pay bills that Medicare rejects simply because they have enrolled in the trial This report recommends an explicit policy for reimbursement of routine patient care costs in clinical trials It further recommends that HCFA provide additional support for selected clinical trials and that the government support the establishment of a national clinical trials registry These policies 1 should assure that beneficiaries would not be denied coverage merely because they have volunteered to participate in a clinical trial and 2 would not impose excessive administrative burdens on HCFA its fiscal intermediaries and carriers or investigators providers or participants in clinical

Explicit rules would have the added benefit of increasing the uniformity of reimbursement decisions made by Medicare fiscal intermediaries and carriers in different parts of the country. Greater uniformity would in turn decrease the uncertainty about reimbursement when providers and patients embark on a clinical trial.

National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Care Services, Committee on the Use of Selected Assistive Products and Technologies in Eliminating or Reducing the Effects of Impairments, 2017-09-01
The U.S. Census Bureau has reported that 56.7 million Americans had some type of disability in 2010, which represents 18.7 percent of the civilian noninstitutionalized population included in the 2010 Survey of Income and Program Participation. The U.S. Social Security Administration (SSA) provides disability benefits through the Social Security Disability Insurance (SSDI) program and the Supplemental Security Income (SSI) program. As of December 2015, approximately 11 million individuals were SSDI beneficiaries and about 8 million were SSI beneficiaries. SSA currently considers assistive devices in the nonmedical and medical areas of its program guidelines. During determinations of substantial gainful activity and income eligibility for SSI

benefits the reasonable cost of items devices or services applicants need to enable them to work with their impairment is subtracted from eligible earnings even if those items or services are used for activities of daily living in addition to work In addition SSA considers assistive devices in its medical disability determination process and assessment of work capacity The Promise of Assistive Technology to Enhance Activity and Work Participation provides an analysis of selected assistive products and technologies including wheeled and seated mobility devices upper extremity prostheses and products and technologies selected by the committee that pertain to hearing and to communication and speech in adults Handbook of Central Auditory Processing Disorder, Volume II, Second Edition Gail D. Current Challenges in Cardiovascular Molecular Diagnostics Matteo Vatta, Valeria Novelli, Luisa Mestroni, Jeffrey A. Towbin, Carlo Napolitano, Guia Guffanti, 2017-09-12 The field of cardiovascular genetics has tremendously benefited from the recent application of massive parallel sequencing technology also referred to as next generation sequencing NGS However along with the discovery of additional genes associated with human cardiac diseases the analysis of large dataset of genetic information uncovered a much more complex and variegated landscape which often departs from the comfort zone of the monogenic Mendelian diseases image that clinical molecular geneticists have been well acquainted with for many decades It is now clear that in addition to highly penetrant genetic variants which in isolation are able to recapitulate the full clinical presentation when expressed in animal models we are now aware that a small but significant fraction of subjects presenting with cardiac muscle diseases such as cardiomyopathies or primary arrhythmias such as long QT syndrome LQTS may harbor at least two deleterious variants in the same gene compound heterozygous or in different gene double heterozygous Although the clinical presentation in subjects with more than one deleterious variant appears to be more severe and with an earlier disease onset it somehow changes the viewpoint of clinical molecular geneticists whose aim is to identify all possible genetic contributors to a human condition In this light the employment in clinical diagnostics of the NGS technology allowing the simultaneous interrogation of a DNA target spanning from large panel of genes up to the entire genome will definitely aid at uncovering all such contributors which will have to be tested functionally to confirm their role in human cardiac conditions The uncovering of all clinically relevant deleterious changes associated with a cardiovascular disease would probably increase our understanding of the clinical variability commonly occurring among affected family relatives and potentially provide with unexpected therapeutic targets for the treatment of symptoms related to the presence of accessory deleterious genetic variants other than the key molecular culprit The objective of this Research Topic is to explore the current challenges presenting to the cardiovascular genetics providers such as clinical geneticists genetic counselors clinical molecular geneticists and molecular pathologists involved in the diagnosis counseling testing and interpretation of genetic tests results for the comprehensive management of patients affected by cardiovascular genetic disorders
