also benefits readers by tackling matters related to trans boundary cooperation on water including rainwater and river basin management pricing issues participatory water management and the role of women in sustainable water use amongst others

Sustainability of Integrated Water Resources Management Shimelis Gebriye Setegn, Maria Concepcion

Donoso, 2016-10-29 The main focus of this book is sustainable management of water resources in a changing climate The book also addresses the question of how to define and measure the sustainability of Integrated Water Resources Management IWRM The sustainability of IWRM is an important issue when planning and or developing policies that consider the impact of climate change water governance and ecohydrology in the context of a more holistic approach to ensure sustainable management of water resources Sustainable IWRM is more about processes and relatively little systematic or rigorous work has been done to articulate what components are the most essential to ensure the ongoing sustainability of IWRM efforts The chapters cover topics including global prospective of IWRM allocation of environmental flows in IWRM ecohydrology water resources and environmental sustainability climate change and IWRM IWRM and water governance including social economic public health and cultural aspects climate change resiliency actions related to water resources management sustainability and tools in support of sustainability for IWRM This book will be of interest to researchers practitioners water resources managers policy and decision makers donors international institutions governmental and non governmental organizations educators as well as graduate and undergraduate students It is a useful reference for Integrated Water Resources Management IWRM ecohydrology climate change impact and adaptations water governance environmental flows geographic information system and modeling tools water and energy nexus and related topics

Balancing Water for Humans and Nature Johan Rockstrom, 2013-06-17 Balancing Water for Humans and Nature authored by two of the world's leading experts on water management examines water flows the blood stream of both nature and society in terms of the crucial links balances conflicts and trade offs between human and environmental needs The authors argue that a sustainable future depends fundamentally on our ability to manage these trade offs and encourage long term resilience They advocate an ecohydrological approach to land water environmental problems and advance a strong reasoned argument for viewing precipitation as the gross fresh water resource ultimately responsible for sustaining all terrestrial and aquatic ecosystem services This book makes the most coherent and holistic argument to date for a new ecological approach to understanding and managing water resources for the benefit of all Basing their analysis on per capita needs for an acceptable nutritional diet the authors analyse predictions of the amounts of water needed for global food production by 2050 and identify potential sources Drawing on small scale experiences in Africa and Asia they also cover the vulnerability of the semi arid tropics through a simplified model of green and blue water scarcity components

Water for the Environment Avril Horne, Angus Webb, Michael Stewardson, Brian Richter, Mike Acreman, 2017-08-16 Water for the Environment From Policy and Science to Implementation and Management provides a holistic view of environmental water management offering clear links across

disciplines that allow water managers to face mounting challenges The book highlights current challenges and potential solutions helping define the future direction for environmental water management In addition it includes a significant review of current literature and state of knowledge providing a one stop resource for environmental water managers Presents a multidisciplinary approach that allows water managers to make connections across related disciplines such as hydrology ecology law and economics Links science to practice for environmental flow researchers and those that implement and manage environmental water on a daily basis Includes case studies to demonstrate key points and address implementation issues

Water, Sustainable Development and the Nexus Velma I. Grover,Amani Alfarra,2019-08-30 Water is intricately linked with food security energy security and sustainable development As the world is moving towards sustainable development goals it is critical to recognize the role of water in attaining these goals The Water Energy Food Nexus draws attention to the complex and interrelated nature of global resource systems and forces us to think about how a decision in one sector impacts other interlinked sectors as well This book looks at the three dimensions of sustainable developmentenvironment economics and society and how water is linked with them and explores the nexus approach as a framework to look at the issues and identify solutions

Putting Water Security to Work Chad Staddon,Christopher A. Scott,2021-09-09 Over the last decade water security has replaced sustainability as the key optic for thinking about how we manage water This reframing has offered benefits including clear recognition of the link between humans the environment and the right to water and also posed challenges the tendency in some quarters to interpret security solely in terms of geopolitical or economic securitisation In this collection the authors offer a radical repositioning of these debates updated to reflect the concerns of our post pandemic world The chapters in this volume examine several different themes including how water security articulates with locality and culture how it operates across spatial scales and its moral ethical resonances The chapters in this book were originally published in the journals Water International and International Journal of Water Resources Development

Water Resources Sustainability Larry Mays,2006-08-29 Expert insights into one of the major issues of the 21st Century Written by a team of leading experts this resource provides the latest information and thinking on the globally critical subject of water sustainability and management The author includes methods for analyzing water resource needs modeling supply reliability irrigation and optimization

Water Ethics David Groenfeldt,2019-02-21 Fully revised and updated this second edition of Water Ethics continues to consolidate water ethics as a key dimension of water related decisions The book introduces the idea that ethics are an intrinsic dimension of any water policy program or practice and that understanding what ethics are being acted out in water policies is fundamental to an understanding of water resource management Alongside updated references and the introduction of discussion questions and recommended further reading this new edition discusses in depth three significant developments since the publication of the first edition in 2013 The first is the growing awareness of the climate crisis as an existential threat and associated concern about adaptive

strategies for sustainable water management and ways of using water management for climate mitigation e g practically through agricultural soil management and conceptually through ethics awareness Second there has been increased clarity among the religious community Indigenous leaders and progressive academics that ethics needs to become an arena for application and action e g the Vatican encyclical Laudato Si protests at Standing Rock and Flint Michigan in the US and climate demonstrations worldwide Thirdly there have been new normative water standards ranging from water stewardship industry initiative water charters Berlin and the on going initiative to develop a global water ethics charter Drawing on case studies from countries including Australia India the Philippines South Africa and the United States this textbook is essential reading for students of environmental ethics and water governance and management

The Business of Water and Sustainable Development Jonathan Chenoweth, Juliet Bird, 2018-05-08 A renewed commitment to improved provision of water and sanitation emerged in the 2002 Johannesburg Declaration on Sustainable Development Although many of the statements in the Declaration were vaguely worded making it hard to measure progress or success the Plan of Implementation of the Summit agreed by the delegates to the conference clearly stated that we agree to halve by the year 2015 the proportion of people who are unable to reach or to afford safe drinking water and the proportion of people who do not have access to basic sanitation Given the United Nations predicted growth in global population from 6.1 billion in 2000 to 7.2 billion by 2015 this commitment will pose formidable challenges To meet it by the end of just a decade and half approximately 6.6 billion people will need to have access to safe drinking water supplies This is more than the current population of the world and involves not only maintaining existing levels of supply but also providing new or upgraded services to 1.7 billion people The challenge for sanitation is equally daunting 5.8 billion people will need to be serviced including new access provision for 2.1 billion Even if these ambitious targets are met representing a major achievement for the global community there will still be approximately 650 million people in the world without access to safe drinking water and 1.4 billion without sanitation What is clear is the magnitude of the problem facing the international community in terms of water supply and sanitation Continuation of the status quo and the type of progress made during the 1990s will not permit the Johannesburg targets to be met Instead it will be necessary to promote a combination of many different new and innovative approaches each of which will contribute towards the overall targets These approaches must include technological advances that identify new sources and improve the quality of those already in use managerial techniques that increase the efficiency and effectiveness of service delivery at both micro and macro scale and fiscal approaches that tap into additional financial resources to make improvements affordable In the past each of these aspects was seen as primarily the responsibility of government which supported research into technology managed supply and disposal systems and provided the funds to pay for them This view has changed beginning in the 1980s and increasing in the 1990s with growing moves towards privatisation of many aspects of the water sector Underpinning this has been a shift away from seeing water as a

public good that is essential for life with subsidised supply provided as part of an overall welfare system to a more market oriented approach where the state although still responsible for maintaining universal access to water services uses market forces to meet this aim The Business of Water and Sustainable Development aims to illustrate the range of approaches that will be necessary if the percentage of the global population having access to adequate and safe water and sanitation is to be increased in line with the brave assertions from Johannesburg World Summit on Sustainable Development Some of approaches will be large scale Western style improvements involving the creation of new business models their effectiveness assessed by traditional approaches of fiscal and social analysis Such schemes may be instigated and partly funded by governments but are increasingly turning to the private sector for money and expertise In contrast many smaller communities would be better served by following another path to improved water supply and sanitation Because of their size location or traditions they may achieve better results through the adoption of local small scale solutions Non governmental organisations have been very active in this area but to extend their operations many are seeking to adopt a more business like model All water supply and waste disposal agencies large or small need to support and encourage continued research into technological solutions that seek out better more sustainable ways to use our increasingly scarce supplies of good quality fresh water

Water Security, Climate Change and Sustainable Development Asit K. Biswas, Cecilia

Tortajada, 2016-08-23 This book pursues a comprehensive approach so as to arrive at a better understanding of the implications of climate change on sustainable development focusing on the perspective of water Climate change is one of today's most pressing global issues and will become increasingly important in the decades to come as societies will feel its pervasive impacts in many aspects of their lives Given that the majority of these climate change impacts will be felt through the medium of water the book explores the interrelationships and inter linkages between water climate change and sustainable development

Water and the Law Michael Kidd, Loretta Feris, Alejandro Iza, Tumai Murombo, 2016 Water and the Law examines the critical relationship between law and the management of water resources in the context of ensuring environmental sustainability It highlights the central importance of integrated water resources management and cooperation in achieving sustainability The book considers two broad themes that are critical for life on Earth how law can contribute to the sustainability of water itself and how the law's regulation of water can contribute to the sustainability of life both human life as well as that of other species in their natural environment The expert contributors highlight that current approaches to water governance embrace integrated water resources management and appreciation of the holistic nature of the hydrological cycle In addition to the recognition of the nature of water there is also an apparent need for addressing water concerns in a cooperative manner Capturing the complexities and challenges of protecting water as a resource on the one hand and utilizing it as a service on the other this thought provoking book will prove a valuable resource for researchers and students of both water law and the nexus of environmental law with human rights Contributors include H Alebachew A
