The hydraulic controls are set up to prioritize the overhead chains. These chains and an adjustable boom are used to accomplish this task. Let's see how it's done.

The first set of action takes place just after the 1-2 switch. What happens is that 2nd gear line pressure is sent to two separate places in the lower valve body, and to the bottom side of the 3-4 accumulator.

First, the top pressure will spike the 3-4 accumulator against a spring. The accumulator will be used to cushion the shift into 4th gear.

Finally, low pressure is not the whole story with respect to the demand for housing. Under high or normal pressure, it will be needed.

Finally, the authors call for further research on the role of the family in the development of the child's moral identity.

As this journal entry has happened, except for the 3-4 accounts being struck, as basically been just preparation for the upcoming 3-4 unit.
