Roadways for People Lynn Peterson, Elizabeth Doerr, 2022-12-06 Seventy years of a car only approach not car centric it s car only is actually not just non driver hostile it s driver hostile No one benefits Beth Osborne Director Transportation for America The car only approach in transportation planning and engineering has led to the construction of roadways that have torn apart and devalued communities especially Black and Brown communities Forging a new path to repair this damage requires a community solutions based approach to planning designing and building our roadways When Lynn Peterson began working as a transportation engineer she was taught to evaluate roadway projects based only on metrics related to driver safety allowable speed for the highest number of cars project schedule and budget Involving the community and collaborating with peers were never part of the discussion Today Peterson is a recognized leader in transportation planning and engineering known for her approach that is rooted in racial equity guided by a process of community engagement and includes collaboration with other professionals In *Roadways for People* Lynn Peterson draws from her personal experience and interviews with leaders in the field to showcase new possibilities within transportation engineering and planning She incorporated a community solutions based approach in her work at Metro TriMet and while

running the Washington State Department of Transportation where she played an instrumental role in the largest transportation bill in that state's history. The community solutions based approach moves away from the narrow standards of traditional transportation design and focuses instead on a process that involves consistent feedback learning loops and meaningful and regular community engagement. This approach seeks to address the transportation needs of the most historically marginalized members of the community. *Roadways for People* is written to empower professionals and policymakers to create transportation solutions that serve people rather than cars. Examples across the U.S. from Portland, Oregon to Baltimore, Maryland show what is possible with a community centered approach. As traditional highway expansions are put on pause around the country, professionals and policymakers have an opportunity to move forward with a better approach. Peterson shows them how.

Creating Resilient Transportation Systems John Renne, Brian Wolshon, Anurag Pande, Pamela Murray-Tuite, Karl Kim, 2022-02-05. *Creating Resilient Transportation Systems: Policy Planning and Implementation* demonstrates how the transportation sector is a leading producer of carbon emissions that result in climate change and extreme weather disruptions and disasters. In the book, Renne, Wolshon, Murray-Tuite, Pande, and Kim demonstrate how to minimize the transportation impacts associated with these urban disasters with an ultimate goal of returning them to at least status quo in the shortest feasible time. Assesses the short and long term impacts of transportation systems on the natural environment at local, regional, and global scales. Examines transportation systems in relation to risk, vulnerability, adaptation, mitigation, sustainability, climate change, and livability. Shows how urban transportation investments in transit, walking, and bicycling result in significantly lower per capita carbon emissions when compared to investing in sprawling automobile dependent regions.

Design Guidance for Intersection Auxiliary Lanes Kay Fitzpatrick, 2014. *TRB's National Cooperative Highway Research Program NCHRP Report 780: Design Guidance For Intersection Auxiliary Lanes* expands on guidance provided in *A Policy on Geometric Design of Highways and Streets*, the Green Book published by the American Association of State Highway and Transportation Officials (AASHTO). This report highlights information regarding bypass lanes, channelized right turn lanes, deceleration and taper length design, and capacity of multiple left turn lanes and alternative intersection designs. Publisher description.

Bicycles in American Highway Planning Bruce D. Epperson, 2014-11-17 The United States differs from other developed nations in the extent to which its national bicycle transportation policy relies on the use of unmodified roadways with cyclists obeying the same traffic regulations as motor vehicles This policy known as vehicular cycling evolved between 1969 when the 10 speed boom saw a sharp increase in adult bicycling and 1991 when the American Association of State Highway and Transportation Officials adopted an official policy that on road bikeways were not desirable This policy resulted from a growing realization by highway engineers and experienced club cyclists that they had parallel interests the cyclists preferred to ride on highways because most bikeways were not designed for high speeds and pack riding and the highway engineers did not want to divert funding from roadways to construct bikeways Using contemporary magazine articles government reports and archival material from industry lobbying groups and national cycling organizations this book tells the story of how America became a nation of bicyclists without bikeways
