arguments for a matured creation is the idea of fine tuning in the universe This concept suggests that the fundamental physical constants and laws of nature are precisely calibrated to allow for the existence of life as we know it For example if the strength of gravity or the electromagnetic force were even slightly different life as we know it would not be possible This level of precision has led some to suggest that a higher power must have orchestrated the creation of the universe with the express purpose of allowing life to flourish on Earth Moreover the Earth itself is viewed as a finely tuned machine that provides the perfect conditions for life From the composition of the atmosphere to the distance of our planet from the sun everything seems to be finely calibrated to allow for the existence of living organisms The intricate ecosystems that exist on Earth further demonstrate the complexity and harmony of this finely tuned planet **Army and Navy Journal** ,1927
