

CASTINGS, STEEL

Specification M-201

Adopted: 1923; Last Revised: 2018

1.0 SCOPE

This specification covers carbon and alloy steel castings for locomotive and car equipment and for miscellaneous use graded as A, B, B+, C, D, and E. This specification provides for all castings unless another AAR specification for a particular product provides for a variation.

2.0 BASIS OF PURCHASE

2.1 Grade A castings shall be furnished unannealed, annealed, or normalized unless otherwise specified by the purchaser. Grades B and B+ castings shall be furnished normalized or normalized and tempered. Grade C castings shall be furnished normalized and tempered or quenched and tempered. Grades D and E castings shall be furnished quenched and tempered.

2.2 At the purchaser's request, a certification will be made the basis of acceptance. The certification shall include a statement that the material has been manufactured, sampled, tested, and inspected in accordance with, and meets the requirements of, all applicable provisions of these specifications. Each certification furnished shall be signed by an authorized agent of the supplier or manufacturer. Where not specifically stated, it is to be understood that upon the request of the purchaser records mentioned in this specification shall be made available for review by the purchaser.

3.0 RECORDS

The manufacturer shall maintain records for a minimum of 3 years of all of the weights, mechanical test reports, chemical test reports, and heat-treatment records required by this specification—representing the purchased castings. These records will be made available to the purchaser upon request. The manufacturer shall also maintain records for a minimum of 3 years that provide traceability from the serial number of individual castings, where serial numbers are required, to the records stated above.

MANUFACTURE

4.0 PROCESS

The steel may be made by one or more of the following processes: open hearth, electric furnace, crucible, converter, or basic oxygen.

5.0 HEAT TREATMENT

Castings shall be cleaned sufficiently to respond to heat-treatment. Internal cavities shall not be blocked by molding material. They shall then be treated according to the following procedure appropriate to the requirements of paragraph 2.0.

After pouring, castings shall be allowed to cool to a temperature below 1000 °F (538 °C) prior to heat-treatment at a rate that will not be injurious to the castings.

5.1 Full Annealing

The casting shall be heated to the proper temperature above the transformation range for the required time to achieve complete austenization and to refine the grain structure. The casting shall then be allowed to cool slowly in the furnace. Unless otherwise required by the purchaser, the manufacturer has the option of normalizing instead of full annealing, where full annealing is specified.
