however a practical issue with regard to issuing citations for out of state motorists as noted in the report Although an economic analysis was not feasible in the study time frame a limited fiscal analysis suggests that in general Virginia localities are not generating net revenue Finally an operational analysis based on violations and crashes shows a potential but not definite safety improvement The cameras clearly affect driver behavior across the 23 intersections where reliable citation data could be obtained citations decreased by an average of 21% per intersection Further the data show that the cameras are correlated with a definite decrease in crashes that are directly attributable to red light running a definite increase in rear end crashes a possible decrease in angle crashes a net decrease in injury crashes attributable to red light running and an increase in total injury crashes More time is needed to determine whether the severity of the eliminated red light running crashes was greater than that of the induced rear end crashes The report recommends that Virginia s photo red enforcement programs be continued for an additional year to resolve this question and to collect additional data that was not feasible during the 6 month time frame of this report
