Leveraging Knowledge for Innovation in Collaborative Networks Luis M. Camarinha-Matos,Iraklis Paraskakis,Hamideh Afsarmanesh,2009-10-13 Collaborative Networks A Tool for Promoting Co creation and Innovation The collaborative networks paradigm offers powerful socio

organizational mechanisms supported by advanced information and communication technologies for promoting innovation. This in turn leads to new products and services, growth of better customer relationships, establishing better project and process management and building higher performing consortia. By putting diverse entities that bring different perspectives, competencies, practices and cultures to work together, collaborative networks develop the right environment for the emergence of new ideas and more efficient yet practical solutions. This aspect is particularly important for small and medium enterprises which typically lack critical mass and can greatly benefit from participation in co-innovation networks. However, larger organizations also benefit from the challenges and the diversity found in collaborative ecosystems. In terms of research, in addition to the trend identified in previous years toward a sounder consolidation of the theoretical foundation in this discipline, there is now a direction of developments more focused on modeling and reasoning about new collaboration patterns and their contribution to value creation. Soft issues including social capital, cultural aspects, ethics and value systems, trust, emotions, behavior etc. continue to deserve particular attention in terms of modeling and reasoning. Exploitation of new application domains such as health care, education and active aging for retired professionals also help identify new research challenges both in terms of modeling and ICT support development.
