 Math 120/Pre-Calculus Review 1

Solve the word for word question:  
 Solve the following equations:  
 $3x^2 + 12x + 12 = 0$

Solve the following word problem:  
 A ball is thrown from a height of 10 feet with an initial velocity of 20 feet per second. The height of the ball in feet is given by the equation  $h(t) = -16t^2 + 20t + 10$ . How long will it take for the ball to hit the ground?

1.1.1  $2x^2 = 8x$

1.1.2  $3x^2 = 4x + 4$

Solve the absolute value for the following:  
 $2(x-3)^2 = 4x + 2$        $2(x-3)^2 = 4x + 2$

Simplify the following:  
 $2x^2 + 3x^2 - 4x^2$

Perform the operation and simplify:  
 $2x^2 + 3x^2 - 4x^2$

Perform the operation and simplify:  
 $2x^2 + 3x^2 - 4x^2$

1.1.3  $2x^2 = 8x$

1.1.4  $3x^2 = 4x + 4$

Uses of Technology in Lower Secondary Mathematics Education Paul Drijvers, Lynda Ball, Bärbel Barzel, M. Kathleen Heid, Yiming Cao, Michela Maschietto, 2016-06-14 This topical survey provides an overview of the current state of the art in technology use in mathematics education including both practice oriented experiences and research based evidence as seen from an international perspective Three core themes are discussed Evidence of effectiveness Digital assessment and Communication and collaboration The survey's final section offers suggestions for future trends in technology rich mathematics education and provides a research agenda reflecting those trends Predicting what lower secondary mathematics education might look like in 2025 with respect to the role of digital tools in curricula teaching and learning it examines the question of how teachers can integrate physical and virtual experiences to promote a deeper understanding of mathematics The issues and findings presented here provide an overview of current research and offer a glimpse into a potential future characterized by the effective integration of technology to support mathematics teaching and learning at the lower secondary level

**Assessment of the Scientific Information for the Radiation Exposure Screening and Education Program** National Research Council, Division on Earth and Life Studies, Board on Radiation Effects Research, Committee to Assess the Scientific Information for the Radiation Exposure Screening and Education Program, 2005-09-01 The Radiation Exposure Compensation Act RECA was set up by Congress in 1990 to compensate people who have been diagnosed with specified cancers and chronic diseases that could have resulted from exposure to nuclear weapons tests at various U S test sites Eligible claimants include civilian onsite participants downwinders who lived in areas currently designated by RECA and uranium workers and ore transporters who meet specified residence or exposure criteria The Health Resources and Services Administration HRSA which oversees the screening education and referral services program for RECA populations asked the National Academies to review its program and assess whether new scientific information could be used to improve its program and determine if additional populations or geographic areas should be covered under RECA The report recommends Congress should establish a new science based process using a method called probability of causation assigned share PC AS to determine eligibility for compensation Because fallout may have been higher for people outside RECA designated areas the new PC AS process should apply to all residents of the continental US Alaska Hawaii and overseas US territories who have been diagnosed with specific RECA compensable diseases and who may have been exposed even in utero to radiation from U S nuclear weapons testing fallout However because the risks of radiation induced disease are generally low at the exposure levels of concern in RECA populations in most cases it is unlikely that exposure to radioactive fallout was a substantial contributing cause of cancer

**for Integrated Project-Based Instruction in STEM Disciplines** Anthony J. Petrosino, Candace Walkington, Denise Ekberg, 2024-01-01 Frameworks for Integrated Project Based Instruction in STEM Disciplines presents an original approach to Science Technology Engineering and Mathematics STEM centric project based instruction We approach project based instruction from an engineering design philosophy and the accountability highlighted in a standards based environment We emphasize a backward design that is initiated by well defined outcomes tied to local state or national standards that provide teachers with a framework guiding students design solving or completion of ill defined tasks In project based STEM classrooms students investigate utilize technological tools construct artifacts participate in debates collaborate and make products to demonstrate what they have learned Features include deep coverage of four topics in PBI scaffolding student driven inquiry driving questions and development of lessons based on national and state standards This focus will ensure a deep understanding by the reader of project based instruction which will allow the reader to create strong and meaningful lesson experiences for their students An emphasis on student driven inquiry will be discussed including the importance of giving students the cognitive tools such as statistical analysis tools they need to research and inquire about the lesson topic A breakdown of what a successful driving question includes will be explained and examples given The book will include strategies for starting the lesson process with ending goals in mind by creating driving questions and breaking down state and national standards This book is strongly rooted in research in the learning sciences about project based instruction but will also be designed to be practically useful to teachers and teacher educators and researchers by bridging research and practice      *Teaching Reading in the Content Areas* Vicki Urquhart, Dana Frazee, 2012-07-03 History teachers aren't expected to teach science math teachers aren't expected to teach social studies so why are all teachers responsible for teaching reading The answer is simple An emphasis on reading and literacy skills in the content areas has an exponential effect on learning in every discipline This completely revised third edition of the best selling Teaching Reading in the Content

Areas seeks to help educators understand how to teach reading in their respective disciplines choose the best reading strategies from the vast array available and positively impact student learning Throughout it draws from new research on the impact of new technologies the population boom of English language learners and the influence of the Common Core State Standards Given the complexities of the reading process teachers deserve and this book provides clear research based answers to overarching questions about teaching reading in the content areas What specific skills do students need to read effectively in each content area Which reading strategies are most appropriate to help students become more effective readers and independent learners What type of learning environment promotes effective reading and learning By focusing on the differences in how content area experts read and reason teachers can be better prepared to help their students understand that the ways they read in biology are different from the ways they read in English history or mathematics To read successfully in different content areas students must develop discipline specific skills and strategies along with knowledge of that discipline With that in mind this book also includes 40 strategies designed to help students in every grade level and across the content areas develop their vocabularies comprehend informational and narrative texts and engage in meaningful discussions of what they read

**Models and Modeling in Engineering Education** ,2008-01-01 Few research based resources make engagement in engineering education reform and research practical for current and future educators Yet engineering educators are under immense pressure to address a wide variety of educational goals that extend well beyond the traditional student learning of engineering science and design The now familiar ABET Criterion 3 a though k has placed the responsibility squarely on the shoulders of every engineering faculty member to ensure that our graduates have abilities in the areas of problem solving in complex engineering settings teaming and communication and understandings in the areas of ethics global and societal impact and contemporary issues Engineering educators must also concern themselves with recruitment and retention of a diverse student population Creating learning experiences and environments that encourage and support the success of all students is a priority for engineering education reform This book is primarily being written for current and future engineering educators and researchers The focus is on the design development implementation and study of a special category of open ended problems the model eliciting activity These are realistic problems with engineering content and contexts designed to tap the strengths of all students while providing hooks to address simultaneously other educational goals As problem solving is at the heart of engineering education and practice it is a theme of wide appeal to engineering educators The aims of this book are to 1 provide engineering faculty with practical tools for creating implementing and assessing the use of open ended problems that meet a variety of educational goals 2 facilitate future

collaborations between engineering and education 3 forward engineering education as a scholarly discipline by providing a resource with which to inform and teach future educators and researchers The book describes how incorporating mathematical modeling activities and projects that are designed to reflect authentic engineering experience into engineering classes has the potential to enhance and tap the diverse strengths of students who come from a variety of backgrounds Based on the experience of a cadre of engineering and education professors who were at Purdue University during a major curriculum reform effort this book provides a case study of the Purdue experience which in part launched the historical beginning of the Department of Engineering Education the first program in the United States The reader will be provided with critical activities and tools designed during the project and the book will be written in a way to help the reader adapt the work to their own situations More Detail About the Content The NSF funded Small Group Mathematical Modeling for Improved Gender Equity SGMM Project featured activities that require students to work in small technical teams to design mathematical models in response to engineering related problems Students produce a product for a specified client who communicates an explicitly stated need Because the activities are designed such that the mathematical model is the answer product students mathematical thinking is revealed providing data for formative and evaluative assessment of the curriculum innovation The activities and the data derived from the use of the activities acted as a seeds for system reform which resulted in changes in practice perspectives and beliefs on the parts of engineering and education professors and graduate researcher assistants The curriculum reform was initiated and stud
