## What molecules make up a membrane?

### Why?

Imagine your bedroom without closets, drawers, shelves, bags or boxes—just a room with a bed. Where would your stuff be? Would you be able to find the things you needed? How efficiently could you get ready for school in the morning? Would all of your school items be together when you sat down to study? The compartments you use in your room—the closet, drawers, etc.—help you organize items by category so that all the items you need to get dressed are in one place. All the items you need for studying are in another place. This compartmentalization improves efficiency. Cells also need organization to improve efficiency. The compartmentalization of cells is achieved by dividing up areas in the cell with membranes. A plasma membrane compartmentalizes internal structures while the cell membrane acts as a boundary between the cell and the external environment.

### Model 1 – Phospholipids

1. Consider the term phospholipid.
  - a. What portion of the molecule in Model 1 is responsible for the “phospho-” part of the name?  
Phosphorus function group and glycerol
  - b. What portion of the molecule in Model 1 is responsible for the “-lipid” part of the name?  
The fatty and acid chain
2. Part of a phospholipid is polar. *Click on the molecule picture in Model 1 to edit*
  - a. Circle the portion of the molecule in Model 1 that is polar.
  - b. Would this portion of the phospholipid mix well with water? Explain your reasoning.  
Yes because its polar and can dissolve in water.
3. Part of a phospholipid is nonpolar. *Click on the molecule picture in Model 1 to edit*

**The Living Barrier** Roy J. Levin,2013-10-22 The Living Barrier A Primer on Transfer across Biological Membranes provides information pertinent to the movement of molecules across cell membranes This book covers a variety of topics including cell membrane membrane transfer water transfer and movement of charged solutes Organized into nine chapters this book begins with an overview of the basic ideas of the cell membrane and reviews the experimental evidence about the structure of the cell membrane This text then reviews the classical electron microscope pictures of membranes Other chapters consider the interactions between electrical potentials and the movements of charged substances which make the membrane transfer of these substances much more complicated than those of neutral molecules This book discusses as well the aspects of water structure and its influence on membrane permeability The final chapter deals with the methods by which membranes are synthesized This book is a valuable resource for biochemists physiologists pharmacologists and botanists

**Structure and Dynamics of Membranes** R. Lipowsky,E. Sackmann,1995-06-15 The first volume of the Handbook deals with the amazing world of biomembranes and lipid bilayers Part A describes all aspects related to the morphology of these membranes beginning with the complex architecture of biomembranes continues with a description of the bizarre morphology of lipid bilayers and concludes with technological applications of these membranes The first two chapters deal with biomembranes providing an introduction to the membranes of eucaryotes and a description of the evolution of membranes The following chapters are concerned with different aspects of lipids including the physical properties of model membranes composed of lipid protein mixtures lateral phase separation of lipids and proteins and measurement of lipid protein bilayer diffusion Other chapters deal with the flexibility of fluid bilayers the closure of bilayers into vesicles which attain a large variety of different shapes and applications of lipid vesicles and liposomes Part B covers membrane adhesion membrane fusion and the interaction of biomembranes with polymer networks such as the cytoskeleton The first two chapters of this part discuss the generic interactions of membranes from the conceptual point of view The following two chapters summarize the experimental work on two different bilayer systems The next chapter deals with the process of contact formation focal bounding and macroscopic contacts between cells The cytoskeleton within eucaryotic cells consists of a network of relatively stiff filaments of which three different types of filaments have been identified As explained

in the next chapter much has been recently learned about the interaction of these filaments with the cell membrane. The final two chapters deal with membrane fusion.
