Chapter 4: Carbon and the Molecular Diversity of Life

Concept 4.1 Organic chemistry is the study of carbon compounds

1. Study this figure of Stanley Miller's experiment to simulate conditions thought to have existed on the early Earth. Explain the elements of this experiment, using arrows to indicate what occurs in various parts of the apparatus.

2. What was collected in the sample for chemical analysis? What was concluded from the results of this experiment?
There were a variety of organic molecules that are common in organisms (hydrocarbons, amino acids, CH₂O, CH₄ and a more)
concluded that organic molecules may have been synthesized abiotically on the Earth

Concept 4.2 Carbon atoms can form diverse molecules by bonding to four other atoms

3. Make an electron distribution diagram of carbon. It is essential that you know the answers to these questions:

- a. How many valence electrons does carbon have? *4!!!*
- b. How many bonds can carbon form? *4!!! up to 4*
- b. What type of bonds does it form with other elements?

covalent bonds

4. Carbon chains form skeletons. List here the types of skeletons that can be formed.

- 1.) length
- 2.) presence of rings
- 3.) branching
- 4.) double bond position

5. What is a hydrocarbon? Name two. Are hydrocarbons hydrophobic or hydrophilic?

An organic molecule consisting only of carbon & Hydroge
Hydrophobic

Critical Care Study Guide Gerard J. Criner, Gilbert E. D'Alonzo, 2013-03-09 Critical care medicine is a dynamic and exciting arena where complex pathophysiologic states requiring extensive knowledge and clinical acumen are commonly found. Caring for critically ill patients requires an extensive knowledge of basic pathophysiology as well as awareness of the appropriate diagnostic tests and therapeutic interventions. Because this knowledge base crosses many different disciplines, introduction to caring for the intensive care patient while exciting may also be intimidating. This textbook is designed toward making the dynamic environment of the critical care unit understandable and the approach to the patient both logical and successful. The book contains three components: 1. description of the procedural tasks commonly performed for the critically ill patient; 2. explanation of the most common pathophysiologic states encountered; and 3. description of specific disease entities with details of their differential diagnosis, diagnostic strategy, and therapeutic plan. This book also uses several educational approaches that we have found useful in our own teaching sessions and prior textbooks. Clinical cases introduce chapters and highlight chapter segments to emphasize clinical relevancy. As an additional study aid, margin notes highlight important teaching points and facilitate easy review of chapter content. To consolidate the principles outlined in each chapter, review questions with full text explanations are provided at the end of each chapter. All these elements help reinforce the most important messages for the reader.

Increasing Production from the Land Andrew Coulson, Antony Ellman, 2018-08-17 African agriculture faces major challenges with growing population pressure and the impact of climate change. Until now, food production overall has broadly kept pace with demand. To maintain this impressive achievement, production from the land needs to be intensified; soil fertility must be enhanced; forests and water resources must be conserved; and land use practices must be sustainable over the long term. This book shows what needs to be done and points to how best to achieve this. The book starts with a brief guide to what plants and animals need to grow well; how farmers currently use the land; and the research that is being conducted on new agricultural technologies. A comparison is made of productivity on small and large farms, which demonstrates that, contrary to some suggestions, small farmers properly serviced can be as productive or even more productive than larger farms. Subsequent chapters discuss issues of land tenure, pastoralism, training, the importance of women farmers, access to finance, markets, value chains, and contract farming as a partnership between small-scale producers, processors, and traders in agricultural products. The final section of the book discusses whether a new green revolution is feasible or desirable for Africa. The potential risks and benefits of dependence on purchased agrochemicals, genetically modified varieties, and multinational seed and chemical companies are examined. A series of twelve broad policy proposals for achieving a sustainable agriculture sector is presented for consideration. Fifteen case studies illustrate the issues discussed in the book. Most of the examples are from East Africa.

particularly Tanzania but the principles addressed are relevant across the African continent Each chapter of the book includes references and suggestions for further reading most of them freely available to anyone with internet access A set of essay questions exploring the issues covered in each chapter is included to provide practical help for students of agriculture and their teachers **Book Review Digest** ,1916 **Counseling the Nursing Mother: A Lactation Consultant's**
