other things baseball Reaganomics daring lottery schemes Voltaire the replicability crisis in psychology Italian Renaissance painting artificial languages the development of non Euclidean geometry the coming obesity apocalypse Antonin Scalia s views on crime and punishment the psychology of slime molds what Facebook can and can t figure out about you and the existence of God Ellenberg pulls from history as well as from the latest theoretical developments to provide those not trained in math with the knowledge they need Math as Ellenberg says is an atomic powered prosthesis that you attach to your common sense vastly multiplying its reach and strength With the tools of mathematics in hand you can understand the world in a deeper more meaningful way How Not to Be Wrong will show you how

Causal Nets, Interventionism, and Mechanisms Alexander Gebharter, 2017-01-11 This monograph looks at causal nets from a philosophical point of view The author shows that one can build a general philosophical theory of causation on the basis of the causal nets framework that can be fruitfully used to shed new light on philosophical issues Coverage includes both a theoretical as well as application oriented approach to the subject The author first counters David Hume s challenge about whether causation is something ontologically real The idea behind this is that good metaphysical concepts should behave analogously to good theoretical concepts in scientific theories In the process the author offers support for the theory of causal nets as indeed being a correct theory of causation Next the book offers an application oriented approach to the subject The author shows that causal nets can investigate philosophical issues related to causation He does this by means of two exemplary applications The first consists of an evaluation of Jim Woodward s interventionist theory of causation The second offers a contribution to the new mechanist debate Introductory chapters outline all the formal basics required This helps make the book useful for those who are not familiar with causal nets but interested in causation or in tools for the investigation of philosophical issues related to causation
