are the largest landforms built by plants and animals Their study therefore incorporates a wide range of disciplines This
encyclopedia approaches coral reefs from an earth science perspective concentrating especially on modern reefs Currently
coral reefs are under high stress most prominently from climate change with changes to water temperature sea level and
ocean acidification particularly damaging Modern reefs have evolved through the massive environmental changes of the
Quaternary with long periods of exposure during glacially lowered sea level periods and short periods of interglacial growth
The entries in this encyclopedia condense the large amount of work carried out since Charles Darwin first attempted to
understand reef evolution Leading authorities from many countries have contributed to the entries covering areas of geology
geography and ecology providing comprehensive access to the most up to date research on the structure form and processes
