Three great scientific revolutions have shaped our understanding of the cosmos and our relationship to it The sixteenth and seventeenth centuries witnessed the Copernican Revolution which bodychecked the Earth as the pivot point of creation and joined us with the rest of the cosmos as one planet among many orbiting the Sun Three centuries later came the second great scientific revolution the Darwinian Revolution It removed us from a distinct divine biological status to place us wholly in the ebb and flow of all terrestrial life This book describes how we're in the midst of a third great scientific revolution five centuries in the making the Stardust Revolution It is the merging of the once disparate realms of astronomy and evolutionary biology and of the Copernican and Darwinian Revolutions placing life in a cosmic context The Stardust Revolution takes readers on a grand journey that begins on the summit of California's Mount Wilson where astronomers first realized that the universe is both expanding and evolving to a radio telescope used to identify how organic molecules the building blocks of life are made by stars It's an epic story told through a scientific cast that includes some of the twentieth century's greatest minds including Nobel laureate Charles Townes who discovered cosmic water as well as the most ambitious scientific explorers of the twenty first century those racing to find another living planet Today an entirely new breed of scientists astrobiologists and astrochemists are taking the study of life into the space age Astrobiologists study the origins evolution and distribution of life not just on Earth but in the universe Stardust science is filling in the missing links in our evolutionary story ones that extend our family tree back to the stars Revue Internationale de Philosophie, 1997 **Scientific Realism** N.
