

## Severity of pneumonia

In adults, severity is assessed by clinical judgement guided by mortality risk score (CRB65 or CURB65) when calculated:

- low severity - CRB65 score 0 or CURB65 score 0 or 1
- moderate severity - CRB65 score 1 or 2 or CURB65 score 2
- high severity - CRB65 score 3 or 4 or CURB65 score 3 to 5

In children and young people, severity is assessed by clinical judgement.

## Prescribing considerations

When choosing an antibiotic(s), take account of:

- the severity assessment (adults), or the severity of symptoms or signs (children and young people); see above
- the risk of complications, for example, a relevant comorbidity (such as severe lung disease or immunosuppression)
- local antimicrobial resistance and surveillance data (such as flu and *Mycoplasma pneumoniae* infection rates)
- recent antibiotic use
- previous microbiological results, including colonisation with multi-drug resistant bacteria

Give oral antibiotics first line if possible  
Review intravenous antibiotics by 48 hours and consider switching to oral antibiotics if possible

September 2019

Pneumonia (community-acquired)

- Offer an antibiotic(s) within 4 hours of establishing a diagnosis
- For children and young people in hospital with severe symptoms or a comorbidity, consider sending a sample (for example, a sputum sample) for microbiological testing

Give advice about:

- possible adverse effects of the antibiotic(s)
- how long symptoms are likely to last
- seeking medical help if symptoms worsen rapidly or significantly, or do not start to improve within 3 days, or the person becomes systemically very unwell

If a respiratory sample has been sent for microbiological testing:

- review the choice of antibiotic(s) when results available, and
- consider changing the antibiotic(s) according to results, using a narrower spectrum antibiotic if appropriate

- Reassess if symptoms do not improve as expected, or worsen rapidly or significantly, taking account of possible non-bacterial causes such as flu
- If symptoms have not improved after antibiotics, send a sample (for example, a sputum sample) for microbiological testing, if not done already

Refer adults to hospital if:

- symptoms or signs suggest a more serious illness such as sepsis, or
- symptoms are not improving as expected with antibiotics

Consider referring adults or seeking specialist advice if they have bacteria resistant to oral antibiotics or they cannot take oral medicines

Consider referring children and young people to hospital or seek specialist paediatric advice on further investigation and management

**Antimicrobial Stewardship in Non-Traditional Settings** Shira Doron, Maureen Campion, 2023-03-01 The evolution of Antimicrobial Resistance is outpacing the ability to create novel antibiotics which is proving to be a global problem in the fact of climate change population growth demographic shifts toward aging populations emerging infections and other crises Therefore clinicians are forced to use the existing

antimicrobials more responsibly to preserve their longevity for generations to come In a parallel vein there has been a recent regulatory acknowledgement of the importance of prudent antimicrobial prescribing mandating the implementation of Antimicrobial Stewardship across all healthcare settings This is harder to manage in a non traditional setting which include long term care facilities outpatient care clinics urgent care centers and others Given the trends in patient care in these settings particularly where the aging community is concerned this is proving to be a growing problem This is troublesome even for spaces that have university and large hospital affiliations There is a plethora of data describing the implementation and outcomes of Antimicrobial Stewardship Programs in acute care hospitals with open access evidence based guidelines endorsed by the Infectious Diseases Society of America However non traditional settings often find themselves struggling to implement the same practices and procedures due to their unique needs and limited resources There may be variability in access to resources applicability and patient type This book seeks to inform those in non traditional healthcare settings on the principles practice and outcomes of Antimicrobial Stewardship Programs to improve patient care across all settings The text begins by unpacking Antimicrobial Stewardship in nontraditional settings then covers specific environments including long term care facilities outpatient clinics and emergency departments The text also covers special topics including veterinary medicine HIV oncology and immunocompromised patients pediatrics neonates transplant and critical care patients
