Nonlinear Computational Geometry Ioannis Z. Emiris, Frank Sottile, Thorsten Theobald, 2009-10-28 An original motivation for algebraic geometry was to understand curves and surfaces in three dimensions Recent theoretical and technological advances in areas such as robotics computer vision computer aided geometric design and molecular biology together with the increased availability of computational resources have brought these original questions once more into the forefront of research One particular challenge is to combine applicable methods from algebraic geometry with proven techniques from piecewise linear computational geometry such as Voronoi diagrams and hyperplane arrangements to develop tools for treating curved objects These research efforts may be summarized under the term nonlinear computational geometry This volume grew out of an IMA workshop on Nonlinear Computational Geometry in May June 2007 organized by I Z Emiris R Goldman F Sottile T Theobald which gathered leading experts in this emerging field The research and expository articles in the volume are intended to provide an overview of nonlinear computational geometry Since the topic involves computational geometry algebraic geometry and geometric modeling the volume has contributions from all of these areas By addressing a broad range of issues from purely theoretical and algorithmic problems to implementation and practical applications this volume conveys the spirit of the IMA workshop

Computer Algebra in Scientific Computing François Boulrier, Matthew England, Timur M. Sadykov, Evgenii V. Vorozhtsov, 2020-10-17 This book constitutes the refereed proceedings of the 22nd International Workshop on Computer Algebra in Scientific Computing CASC 2020 held in Linz Austria in September 2020 The conference was held virtually due to the COVID 19 pandemic The 34 full papers presented together with 2 invited talks were carefully reviewed and selected from 41 submissions They deal with cutting edge research in all major disciplines of computer algebra The papers cover topics such as polynomial algebra symbolic and symbolic numerical computation applications of symbolic computation for investigating and solving ordinary differential equations applications of CAS in the investigation and solution of celestial mechanics problems and in mechanics physics and robotics *The Universal Computer* Martin Davis, 2018-10-08 The

breathhtakingly rapid pace of change in computing makes it easy to overlook the pioneers who began it all Written by Martin Davis respected logician and researcher in the theory of computation *The Universal Computer The Road from Leibniz to Turing* explores the fascinating lives ideas and discoveries of seven remarkable mathematicians It tells the stories of the unsung heroes of the computer age the logicians The story begins with Leibniz in the 17th century and then focuses on Boole Frege Cantor Hilbert and G del before turning to Turing Turing s analysis of algorithmic processes led to a single all purpose machine that could be programmed to carry out such processes the computer Davis describes how this incredible group with lives as extraordinary as their accomplishments grappled with logical reasoning and its mechanization By investigating their achievements and failures he shows how these pioneers paved the way for modern computing Bringing the material up to date in this revised edition Davis discusses the success of the IBM Watson on Jeopardy reorganizes the information on incompleteness and adds information on Konrad Zuse A distinguished prize winning logician Martin Davis has had a career of more than six decades devoted to the important interface between logic and computer science His expertise combined with his genuine love of the subject and excellent storytelling make him the perfect person to tell this story Current Problems of Applied Mathematics and Computer Systems Anatoly Alikhanov, Andrei Tchernykh, Mikhail Babenko, Irina Samoylenko, 2024-09-01

This book is based on the best papers accepted for presentation during the International Conference on Current Problems of Applied Mathematics and Computer Systems APAMCS 2023 The book includes research materials on mathematical problems and solutions in the field of scientific computing artificial intelligence data analysis and modular computing The scope of numerical methods in scientific computing presents original research including mathematical models and software implementations related to the following topics numerical methods in scientific computing solving optimization problems methods for approximating functions etc The studies in data analysis and modular computing include contributions in the field of deep learning neural networks mathematical statistics machine learning methods residue number system and artificial intelligence In addition some articles focus on mathematical modeling of nonlinear physical phenomena Finally the book gives insights into the fundamental problems in mathematics education The book intends for readership specializing in the field of scientific computing parallel computing computer technology machine learning information security and mathematical education

Applied Algebra, Algebraic Algorithms, and Error-correcting Codes, 2006 *Emerging Security Algorithms and Techniques* Khaleel Ahmad, M. N. Doja, Nur Izura Udzir, Manu Pratap Singh, 2019-05-20 Cyber security is the protection of information systems hardware software and information as well from theft damages interruption or misdirection to any of these resources In other words cyber security focuses on protecting computers networks programs and data in use in rest in motion from unauthorized or unintended access change or destruction Therefore strengthening the security and resilience of cyberspace has become a vital homeland security mission Cyber security attacks are growing exponentially Security specialists must occupy in the lab concocting new schemes to preserve the resources and to control
