Research in Education, 1973 *Developing Assessments for the Next Generation Science Standards* National Research Council, Division of Behavioral and Social Sciences and Education, Board on Science Education, Board on Testing and Assessment, Committee on Developing Assessments of Science Proficiency in K-12, 2014-05-29 Assessments understood as tools for tracking what and how well students have learned play a critical role in the classroom *Developing Assessments for the Next Generation Science Standards* develops an approach to science assessment to meet the vision of science education for the future as it has been elaborated in *A Framework for K 12 Science Education Framework and Next Generation Science Standards NGSS* These documents are brand new and the changes they call for are barely under way but the new assessments will be needed as soon as states and districts begin the process of implementing the NGSS and changing their approach to science education The new Framework and the NGSS are designed to guide educators in significantly altering the way K 12 science is taught The Framework is aimed at making science education more closely resemble the way scientists actually work and think and making instruction reflect research on learning that demonstrates the importance of building coherent understandings over time It structures science education around three dimensions the practices through which scientists and engineers do their work the key crosscutting concepts that cut across disciplines and the core ideas of the disciplines and argues that they should be interwoven in every aspect of science education building in sophistication as

students progress through grades K 12 Developing Assessments for the Next Generation Science Standards recommends strategies for developing assessments that yield valid measures of student proficiency in science as described in the new Framework This report reviews recent and current work in science assessment to determine which aspects of the Framework's vision can be assessed with available techniques and what additional research and development will be needed to support an assessment system that fully meets that vision The report offers a systems approach to science assessment in which a range of assessment strategies are designed to answer different kinds of questions with appropriate degrees of specificity and provide results that complement one another Developing Assessments for the Next Generation Science Standards makes the case that a science assessment system that meets the Framework's vision should consist of assessments designed to support classroom instruction assessments designed to monitor science learning on a broader scale and indicators designed to track opportunity to learn New standards for science education make clear that new modes of assessment designed to measure the integrated learning they promote are essential The recommendations of this report will be key to making sure that the dramatic changes in curriculum and instruction signaled by Framework and the NGSS reduce inequities in science education and raise the level of science education for all students

Real Solutions to Equations from Geometry Frank Sottile, 2011-08-31 Understanding finding or even deciding on the existence of real solutions to a system of equations is a difficult problem with many applications outside of mathematics While it is hopeless to expect much in general we know a surprising amount about these questions for systems which possess additional structure often coming from geometry This book focuses on equations from toric varieties and Grassmannians Not only is much known about these but such equations are common in applications There are three main themes upper bounds on the number of real solutions lower bounds on the number of real solutions and geometric problems that can have all solutions be real The book begins with an overview giving background on real solutions to univariate polynomials and the geometry of sparse polynomial systems The first half of the book concludes with fewnomial upper bounds and with lower bounds to sparse polynomial systems The second half of the book begins by sampling some geometric problems for which all solutions can be real before devoting the last five chapters to the Shapiro Conjecture in which the relevant polynomial systems have only real solutions
