## Chapter 33: Invertebrates

Chapters 31, 32, and 33 should be considered as a single unit, and you should try to put all of them together in a single conceptual framework. Due to the scope of our course, you are likely to see more general questions on individual phyla. For each of the phyla that we highlight in the questions that follow, try to know the characters that are unique to that group, and focus on the evolution of various systems. So they have time to teach the more difficult molecular concepts, many teachers choose to have students learn this unit on their own. Our goal here is to focus your time and energy on what we have seen to be commonly asked information. At the end of this Reviewing Guide chapter, you will find a chart that may help you to organize this knowledge.

### Concept 33.1 Sponges are basal animals that lack true tissues

1. You may have learned in an earlier course that sponges are in the phylum Porifera. This group is now known to be polyphyletic, and all sponges belong to either phylum Calcarea or phylum Silicea. They are the simplest animals and lack true tissues.

Label the following: pores, spongocoel, choanocytes, amoebocytes, chitosocyte, flagellum, spicules, epidermis, and mesoglea.

On this sketch of a typical sponge, explain how water flows through the body of a sponge, and describe how it obtains food.

2. What is the feeding method of a sponge?

Introduction to Animal Physiology and Physiological Genetics E. M. Pantelouris,2013-10-22 Introduction to Animal Physiology and Physiological Genetics deals with topics on physiological measurement comparisons and analysis of the role of genotypes This book emphasizes two aspects the changes of physiological patterns in the course of development and the wide variation that can be found within a species The text discusses the response mechanisms of living organisms from nerve impulses chemical sense muscle reaction and includes some studies made on brain function The effects of nutrition and energy such as the intake of food water oxygen and the calculation of basic metabolic rates are explained The book then discusses the role of the internal environment and that of the interstitial body fluid in the higher animals The discussion covers blood circulation cardiac cycle and a special section on the function of the heartbeat in the spider Limulus showing that stimulation of the abdominal ganglia increases the heartbeats The text also considers significant concepts of physiological genetics and then explains asexual and sexual reproduction the sex hormones of invertebrates and the use of stimulants for animal production The physiological differences between species are examined but more particularly on the reservoir of genetic diversity where differences abound between families and offspring One research made in molecular biology concludes that genes are responsible for regulating the amino acid sequence of proteins Molecular biologists general biologists zoologists and microbiologists will find the articles in this collection invaluable
