Vazquez, 2016-03-21 This monograph describes the development and use of a 3D visualization teaching learning trajectory for elementary age learners Using design research principles the authors developed this trajectory using the NCTM recommendations and the Spatial Operational Capacity SOC theoretical framework to guide lesson development The SOC framework utilizes actual 3D models 2D and abstract representations of the actual models and a dynamic computer interface the Geocadabra Construction Box which integrates these representations dynamically in real time The work begins with describing the theoretical SOC frameworks that guided the study the inquiry based learning focus the research method used and informal pre program interviews with participant children The next chapter describes introductory activities used to orient the children to the 3D objects that they used throughout the program The book then focuses on the development of abstract top view numeric plan representations leading to representations of rectangular prisms followed by front side top

view representations The last chapter shows how numeracy was integrated into the program to support the demanding official mathematics curriculum Ditch the Daily Lesson Plan Michael Fisher, 2015-11-12 Designing and implementing daily lesson plans can be among the most frustrating and time consuming aspects of teaching a tedious exercise that places artificial restrictions on student creativity and engagement with learning In this game changing book author and instructional coach Michael Fisher shows teachers how they can free themselves from rigid and ineffective busywork by replacing lesson plans with learning journeys that are guided by the students abilities interests and skill levels rather than by pre selected checklists of day to day benchmarks Loaded with tips strategies and detailed real life examples Ditch the Daily Lesson Plan is the perfect guide to crafting student centered learning experiences at all levels and across the content areas
