Vogel, 2021-12-17 Economists broadly define financial asset price bubbles as episodes in which prices rise with notable rapidity and depart from historically established asset valuation multiples and relationships Financial economists have for decades attempted to study and interpret bubbles through the prisms of rational expectations efficient markets equilibrium arbitrage and capital asset pricing models but they have not made much if any progress toward a consistent and reliable theory that explains how and why bubbles and crashes evolve and are defined measured and compared This book develops a new and different approach that is based on the central notion that bubbles and crashes reflect urgent short side rationing which means that as such extreme conditions unfold considerations of quantities owned or not owned begin to displace considerations of price **What Caused the Financial Crisis** Jeffrey Friedman, 2011-06-06 The deflation of the subprime mortgage bubble in 2006 7 is widely agreed to have been the immediate cause of the collapse of the financial sector in 2008 Consequently one might think that uncovering the origins of subprime lending would make the root causes of the crisis obvious That is essentially where public debate about the causes of the crisis began and ended in the month following the bankruptcy of Lehman Brothers and the 502 point fall in the Dow Jones Industrial Average in mid September 2008 However the subprime housing bubble is just one piece of the puzzle Asset bubbles inflate and burst frequently but severe worldwide recessions are rare What was different this time In What Caused the Financial Crisis leading economists and scholars delve into the major causes of the worst financial collapse since the Great Depression and together present a comprehensive picture of the factors that led to it One essay examines the role of government regulation in expanding home ownership through mortgage subsidies for impoverished borrowers encouraging the subprime housing bubble Another explores how banks were able to securitize mortgages by manipulating criteria used for bond ratings How this led to inaccurate risk assessments that could not be covered by sufficient capital reserves mandated under the Basel accords is made clear in a third essay Other essays identify monetary policy in the United States and Europe corporate pay structures credit default swaps banks leverage and financial deregulation as possible causes of the crisis With contributions from Richard A Posner Vernon L Smith Joseph E Stiglitz and John B Taylor among others What Caused the Financial Crisis provides a cogent comprehensive and credible explanation of why the crisis happened It will be an essential resource for scholars and students of finance economics history law political science and sociology as well as others interested in the financial crisis and the nature of modern capitalism and regulation
