

Tropisms

Tropism = directional growth response.

(Plants grow in a certain direction in response to a stimulus).

Which way does the stem grow? WHY?

Which way do the roots grow? WHY?

LO: Understand how hormones control plant growth.

3plant Hormones S Openwetware Answers:

Plant Hormones P.J. Davies, 2013-12-01 Plant hormones play a crucial role in controlling the way in which plants grow and develop. While metabolism provides the power and building blocks for plant life, it is the hormones that regulate the speed of growth of the individual parts and integrate these parts to produce the form that we recognize as a plant. In addition, they play a controlling role in the processes of reproduction. This book is a description of these natural chemicals: how they are synthesized and metabolized, how they work, what we know of their molecular biology, how we measure them, and a description of some of the roles they play in regulating plant growth and development. Emphasis has also been placed on the new findings on plant hormones deriving from the expanding use of molecular biology as a tool to understand these fascinating regulatory molecules. Even at the present time when the role of genes in regulating all aspects of growth and development is considered of prime importance, it is still clear that the path of development is nonetheless very much under hormonal control, either via changes in hormone levels in response to changes in gene transcription or with the hormones themselves as regulators of gene transcription. This is not a conference proceedings but a selected collection of newly written, integrated, illustrated reviews describing our knowledge of plant hormones and the experimental work that is the foundation of this knowledge.
