Congruent Figures

Each pair of polygons is congruent. Find the measures of the numbered angles.

 $\triangle CAT \cong \triangle PSD$. List each of the following.

- three pairs of congruent sides
- three pairs of congruent angles

 $WCCF \cong AKLM$. List each of the following.

- four pairs of congruent sides
- four pairs of congruent angles

For Exercises 4 and 5, can you conclude that the triangles are congruent? Justify your answers.

4. $\triangle GHI$ and $\triangle LMN$

5. $\triangle QRS$ and $\triangle TUV$

10. **Developing Proof** Use the information given in the diagram. Give a reason that each statement is true.

- $\angle L \cong \angle Q$
- $\angle LNM \cong \angle QMP$
- $\angle M \cong \angle P$
- $LN \cong QP$, $LM \cong QM$, $LN \cong QP$
- $\triangle LNM \cong \triangle QMP$

Henry L. Foster, 1884 *A Guide Book to Mathematics* BRONSHTEIN, 2012-12-06 TO THE FIRST RUSSIAN EDITION It was a very difficult task to write a guide book of a small size designed to contain the fundamental knowledge of mathematics which is most necessary to engineers and students of higher technical schools In our tendency to the compactness and brevity of the exposition we attempted however to produce a guide book which would be easy to understand convenient to use and as accurate as possible as much as it is required in engineering It should be pointed out that this book is neither a handbook nor a compendium but a guide book Therefore it is not written as systematically as a handbook should be written Hence the reader should not be surprised to find for example L'Hôpital's rule in the section devoted to computation of limits which is a part of the chapter Introduction to the analysis placed before the concept of the derivative or information about the Gamma function in the chapter Algebra just after the concept of the factorial There are many such imperfections in the book Thus a reader who wants to acquire certain information is advised to use not only the table of contents but also the alphabetical index inserted at the end of the book If a problem mentioned in the text is explained in detail in another place of the book then the corresponding page is indicated in a footnote The Bookseller, 1894 **Comprehensive Objective**

If each point of the plane is to be given a color how many colors do we need if every two points at unit distance are to receive distinct colors More than half a century ago it was established that the least number of colors needed for such a coloring is either 4 or 5 or 6 or 7 Well which is it Despite efforts by a legion of very bright people many of whom developed whole branches of mathematics and solved problems that seemed much harder not a single advance towards the answer has been made This mystery and scores of other similarly simple questions form one level of mysteries explored In doing this the author presents a whole lot of attractive results in an engaging way and with increasing level of depth Catalog of Copyright Entries.
