

Spark Plugs

1. Replacing the spark plug on a motorcycle is relatively simple. First, locate the cylinder head of the motorcycle engine, which has a protrusion that is the spark plug cap.

2. Clean the spark plug cap and the surrounding area thoroughly. You can use an air gun to blow away any debris to prevent foreign objects from entering the spark plug installation hole when removing the spark plug. Once cleaned, remove the spark plug cap.

3. Once the spark plug head is exposed, use a specialized tool from the motorcycle to place a spark plug socket over the spark plug. Then, rotate it counterclockwise to loosen the spark plug.

4. Once the spark plug is loose, use your hand to unscrew it completely. Then, replace it with a new spark plug and tighten it in the opposite direction of removal. Finally, attach the spark plug cap securely.

Precautions

Do not let pliers or gap tools touch the iridium center electrode or porcelain.
