Senturia,2005-12-20 It is a real pleasure to write the Foreword for this book both because I have known and respected its author for many years

and because I expect this book's publication will mark an important milestone in the continuing worldwide development of microsystems. By bringing together all aspects of microsystem design, it can be expected to facilitate the training of not only a new generation of engineers but perhaps a whole new type of engineer, one capable of addressing the complex range of problems involved in reducing entire systems to the micro and nano domains. This book breaks down disciplinary barriers to set the stage for systems we do not even dream of today. Microsystems have a long history dating back to the earliest days of microelectronics. While integrated circuits developed in the early 1960s, a number of laboratories worked to use the same technology base to form integrated sensors. The idea was to reduce cost and perhaps put the sensors and circuits together on the same chip. By the late 60s, integrated MOS photodiode arrays had been developed for visible imaging and silicon etching was being used to create thin diaphragms that could convert pressure into an electrical signal. By 1970, selective anisotropic etching was being used for diaphragm formation, retaining a thick silicon rim to absorb package-induced stresses. Impurity and electrochemically based etch stops soon emerged and bulk micromachining came into its own.

Signal and Image Processing for Remote Sensing C.H. Chen, 2024-06-11 Advances in signal and image processing for remote sensing have been tremendous in recent years. The progress has been particularly significant with the use of deep learning-based techniques to solve remote sensing problems. These advancements are the focus of this third edition of *Signal and Image Processing for Remote Sensing*. It emphasizes the use of machine learning approaches for the extraction of remote sensing information. Other topics include change detection in remote sensing and compressed sensing. With 19 new chapters written by world leaders in the field, this book provides an authoritative examination and offers a unique point of view on signal and image processing. Features: Includes all new content and does not replace the previous edition. Covers machine learning approaches in both signal and image processing for remote sensing. Studies deep learning methods for remote sensing information extraction that is found in other books. Explains SAR, microwave, seismic, GPR, and hyperspectral sensors and all sensors considered. Discusses improved pattern classification approaches and compressed sensing approaches. Provides ample examples of each aspect of both signal and image processing. This book is intended for university academics, researchers, postgraduate students, industry, and government professionals who use remote sensing and its applications.
