

Two-Digit Divisor

When the divisor has two digits, long division works the same way, but instead of using facts from multiplication tables when dividing, we might have to use pencil and paper to perform helping multiplications on the side, so to speak.

$$14 \overline{) 7434}$$

14 goes into 7 zero times, so we look at 74. To find how many times does 14 go into 74, you probably have to do several guesses. Check until you find the **maximum** number of times that 14 goes into 74.

$$2 \times 14 = 28 \quad 4 \times 14 = 56 \quad 5 \times 14 = 70 \quad 6 \times 14 = 84$$

From this we can see that 14 goes into 74 five times.

$$\begin{array}{r} 5 \\ 14 \overline{) 7434} \\ \underline{-70} \\ 43 \end{array}$$

Now, how many times does 14 go into 43?

$$2 \times 14 = 28 \quad 3 \times 14 = 42 \quad 4 \times 14 = 56$$

From this we can see that 14 goes into 43 three times.

$$\begin{array}{r} 531 \\ 14 \overline{) 7434} \\ \underline{-70} \\ 43 \\ \underline{-42} \\ 14 \end{array}$$

At this point it is easy: how many times does 14 go into 14?

That is exactly once, so the division is exact and over.

You should check here if the answer was right:

$$\begin{array}{r} 531 \\ \times 14 \\ \hline \end{array}$$

Go through this example with your teacher.

Table of 17:

$$\begin{array}{l} 2 \times 17 = 34 \\ 3 \times 17 = 51 \\ 4 \times 17 = 68 \\ 5 \times 17 = 85 \\ 6 \times 17 = 102 \end{array}$$

$$17 \overline{) 3995}$$

$$\begin{array}{r} 23 \\ 17 \overline{) 3995} \\ \underline{-34} \\ 59 \end{array}$$

$$\begin{array}{r} 235 \\ 17 \overline{) 3995} \\ \underline{-34} \\ 59 \\ \underline{-51} \\ 85 \end{array}$$

Lesson Plans in Arithmetic Kate Kinne O'Neill,Angie B. Whittington,1916 Studying Classroom Teaching as a Medium for Professional Development National Research Council,Policy and Global Affairs,Board on International Scientific Organizations,U.S. National Commission on Mathematics Instruction,Division of Behavioral and Social Sciences and Education,Center for Education,Mathematical Sciences Education Board,2002-08-09 The Mathematical Sciences Education Board MSEB and the U S National Commission on Mathematics Instruction USNCMI took advantage of a unique opportunity to bring educators together In August 2000 following the Ninth International Congress on Mathematics Education ICME 9 in Makuhari Japan MSEB and USNCMI capitalized on the presence of mathematics educators in attendance from the United States and Japan by holding a two and a half day workshop on the professional development of mathematics teachers This workshop used the expertise of the participants from the two countries to develop a better more flexible and more useful understanding of the knowledge that is needed to teach well and how to help teachers to obtain this knowledge A major focus of the workshop was to discuss teachers opportunities in both societies using teaching practice as a medium for professional development Another focus of the workshop addressed practice by considering the records of teaching including videos of classroom lessons and cases describing teachers and their work These proceedings reflect the activities and discussion of the workshop using both print and video to enable others to share in their experience **The Construction Zone** Denis Newman,Peg Griffin,Michael Cole,1989-04-28 In its description of several years of painstaking classroom observations and carefully crafted experimental interventions the construction zone makes clear the cleavage lines between the everyday requirements of classroom teaching and the practice of experimental psychologists The best intentions of researchers to improve education are often undermined by such differences The construction zone is the shared psychological space within which teachers construct environments for their students intellectual development and students construct deeper understandings of the cultural heritage embodied in the curriculum The core of the book is a set of analyses of children s developmental changes during classroom lessons and individual tutorials designed to teach basic concepts in such diverse areas as natural science social studies and arithmetic Fusing techniques currently in wide use in microsociology experimental psychology and ethnographic studies of the classroom the authors offer a compelling vision of intellectual development as a process of joint constructive interaction mediated by cultural artifacts Their approach makes it possible to retain the strength of a developmental perspective which treats intellectual change as a constructive process in the spirit of

Piaget while making it clear that developmental change is simultaneously a social process of cultural transformation as emphasized by Vygotsky and his students **Houghton Mifflin Math Central** Laurie Boswell, Patsy F. Kanter, 1999
