Bureau of Reclamation,1957 *The Complete Technology Book on Electroplating, Phosphating, Powder Coating And Metal Finishing* NIIR Board,2005-10-04 Electroplating and Metal Finishing concerns itself with the development and applications of composites and non metallic coatings These coatings are used for decorative protective and functional application Some of the other common metal surface finishing technologies are phosphating pickling electroforming powder coating etc Electroplating is the process of applying a metallic coating to an article by passing an electric current through an electrolyte in contact with the article thereby forming a surface having properties or dimensions different from those of the article Metal finishing has now come to be known as surface engineering Surface engineering techniques are generally used to develop a wide range of functional properties In addition to the decorative aspects metal finishing aids the protection of metals and alloys from corrosion and rusting A great potential exists for development of new materials involving for example coatings of metals composites particle incorporated anodic coatings and even films of sapphire like materials porous films of niobium etc and coating of refractory metals like molybdenum and tungsten Phosphate coatings have a wide field of application in manufacturing industry both as an aid to mechanical production operations and in surface finishing The major applications for phosphate treatments fall into four areas pre treatment prior to organic coatings protection against corrosion anti wear coatings and phosphating as a production aid Powder coating of aluminium extrusions in particular has become an important feature in the finishing of aluminium There are several advantages of powder powder coating overspray can be recycled and thus it is possible to achieve nearly 100% use of the coating powder coating production lines produce less hazardous waste than conventional liquid coatings capital equipment and operating costs for a powder line are generally less than for conventional liquid lines Surface finishing is a broad range of industrial processes that alter the surface of a manufactured item to achieve a certain property Currently the trend is towards surface treatments Industries in developing countries like India have to be increasingly aware of the need not only for up gradation of existing technologies but also for
