 regulations and market forces that have shaped the industry are also covered **DK Eyewitness Books: Space**  
**Exploration** Carole Stott,2009-12-21 This is a spectacular and informative guide to the mysteries beyond Earth and its  
 atmosphere Original photography of spacecraft both before and after traveling in space and pictures of astronauts and their  
 equipment offer a unique view of the history of space exploration and the daily life of astronauts *The Observer's Guide to*  
*Planetary Motion* Dominic Ford,2014-05-14 To the naked eye the most evident defining feature of the planets is their motion  
 across the night sky It was this motion that allowed ancient civilizations to single them out as different from fixed stars The  
 Observer s Guide to Planetary Motion takes each planet and its moons if it has them in turn and describes how the geometry  
 of the Solar System gives rise to its observed motions Although the motions of the planets may be described as simple  
 elliptical orbits around the Sun we have to observe them from a particular vantage point the Earth which spins daily on its  
 axis and circles around the Sun each year The motions of the planets as observed relative to this spinning observatory take  
 on more complicated patterns Periodically objects become prominent in the night sky for a few weeks or months while at  
 other times they pass too close to the Sun to be observed The Observer s Guide to Planetary Motion provides accurate tables  
 of the best time for observing each planet together with other notable events in their orbits helping amateur astronomers  
 plan when and what to observe Uniquely each of the chapters includes extensive explanatory text relating the events listed to  
 the physical geometry of the Solar System Along the way many questions are answered Why does Mars take over two years  
 between apparitions the times when it is visible from Earth in the night sky while Uranus and Neptune take almost exactly a  
 year Why do planets appear higher in the night sky when they re visible in the winter months Why do Saturn s rings appear  
 to open and close every 15 years This book places seemingly disparate astronomical events into an understandable three

dimensional structure enabling an appreciation that for example very good apparitions of Mars come around roughly every 15 years and that those in 2018 and 2035 will be nearly as good as that seen in 2003 Events are listed for the time period 2010 2030 and in the case of rarer events such as eclipses and apparitions of Mars even longer time periods are covered A short closing chapter describes the seasonal appearance of deep sky objects which follow an annual cycle as a result of Earth's orbital motion around the Sun

**Illinois Municipal Review** ,2007      **Planetary Science** Matthew Brenden Wood,2017-09-15 What do you see when you look up into the sky at night The moon stars maybe even a comet or asteroid You can also see other planets In **Planetary Science Explore New Frontiers** readers ages 12 to 15 embark on a journey through the solar system and beyond exploring planets moons dwarf planets exoplanets and everything in between For many ancient cultures planets were mysterious objects that moved against the backdrop of the heavens in strange but predictable patterns Ever since Galileo Galilei first used a telescope to explore the moons of Jupiter we've known that the planets are much more than mysterious points of light in the night sky With the creation of incredible technologies such as space probes giant ground based telescopes and Earth orbiting observatories we've learned that Mars once had water on its surface that Jupiter's Great Red Spot has been churning for centuries and that thousands of exoplanets circle distant suns Planetary science is also exciting because of what we don't know Was there ever life on Mars Is Planet Nine lurking in the outer reaches of the solar system Will we ever find another Earth How far can we go In **Planetary Science** readers examine the latest information on Pluto the discoveries of the Mars rover Curiosity and the incredible catalog of distant planets uncovered by the Kepler Space Telescope They learn about how planets are formed and why they travel on their orbits Planets those pinpricks of light you might spot on a clear night come closer through informative illustrations links to online primary sources illuminating sidebars and fun facts and hands on in depth activities such as building scale models of planets hunting for alien worlds through citizen science and crafting a comet in the kitchen **Planetary Science** also promotes critical thinking skills through inquiry discovery and research by encouraging readers to explore questions that remain unanswered such as whether Mars once had life or the possibility of a ninth planet hiding in the furthest reaches of the solar system With discoveries being made almost every day it's an exciting time to be a planetary scientist
