EXAFS and Near Edge Structure A. Bianconi, L. Inocchia, S. Stipcich, 2012-12-06 The field of X ray spectroscopy using synchrotron radiation is growing so rapidly and expanding into such different research areas that it is now difficult to keep up with the literature EXAFS and XANES are becoming interdisciplinary methods used in solid state physics biology and chemistry and are making impressive contributions to these branches of science The present book gives a panorama of the research activity in this field It contains the papers presented at the International Conference on EXAFS and Near Edge Structure held in Frascati Italy September 13-17 1982 This was the first international conference devoted to EXAFS spectroscopy Extended X ray Absorption Fine Structure and its applications The other topic of the conference was the new XANES X ray Absorption Near Edge Structure which in of experimental and theoretical developments finally appears to have terms left its infancy The applications of EXAFS concern the determination of local structures in complex systems we have therefore divided the subject matter into different parts on various types of materials amorphous metals glasses solutions biological systems catalysts and special crystals such as mixed valence systems and ionic conductors EXAFS provides unique information for each kind of system but the analysis of EXAFS data also poses special problems in each case General problems of EXAFS data analysis are discussed as well as developments in instrumentation for X ray absorption using synchrotron radiation and laboratory EXAFS
