

DEFINITIONS

Population Density: this is the number of people per unit area. The density of population is obtained by dividing the total population of a country (or any region) by the total area of the country (or region). The density of population for a country can be misleading as it does not show variations between densely populated regions and those areas that are almost unpopulated. Population densities are often shown on choropleth maps.

Population Distribution: describes the way people are located within an area. When plotted on a map, this can reveal those areas that have a high population and those where few people live, which maps of population density fail to show. One of the ways of plotting this information is by means of a dot map.

QUESTIONS

1.
 - density is very high in Asia
 - density seems to be higher in countries with a large population
 - eg. China, India, United States, Indonesia, Brazil, Pakistan, Nigeria, Bangladesh, Russia, Japan, Mexico (these are the top 11 most populated countries in order)
2.
 - population is heavily distributed to the west (in Europe) and the south (in Asia)
 - there are many potential reasons for this:
 - o climate and weather patterns
 - o access to resources
 - o fertility of land
 - o access to freshwater
 - o access to oceans/sea for transportation/shipping of goods
 - o colonial patterns
 - o religion – e.g. Nigeria, Indonesia, Philippines – both Islam and Roman Catholicism promote large families and reject birth control

African swine fever in wild boar Guberti, V., Khomenko, S., Masiulis, M., Kerba S., 2022-07-14 African swine fever ASF is a devastating haemorrhagic viral disease affecting domestic and wild pigs of all ages and sexes. This disease causes massive economic losses, threatens food security and trade, and presents a serious challenge for the pig production sector in affected countries. ASF also threatens the biodiversity conservation of several Asiatic wild Suidae. Since ASF was first

introduced in Georgia in 2007 the disease has spread to many countries in Europe Asia and the Pacific and in 2021 it was detected in the Caribbean states of the Dominican Republic and Haiti both in the Americas In much of its Euro Asiatic range the African swine fever virus ASFV infects wild boar which sometimes act as the main if not the only epidemiological reservoir of the infection keeping it in the environment regardless of the presence of infected domestic pigs The presence of the virus in wild boar populations is a continuous health threat for the sympatric domestic pig population posing a challenge for veterinary and wildlife services that have had little success in attempting to eradicate infections among wildlife especially in the absence of an effective vaccine Finally areas in which ASFV is detected in wild boar remain infected for at least one year after the last recorded case This is a much longer period than that of domestic animals and puts a strain on the services involved requiring a considerable amount of work and human and financial resources The second edition of the handbook provides insights on surveillance and disease management in wild boar based on experiences with ASFV eradication in Belgium and Czechia as well as other recent experiences in the prevention and control of the disease in wild boar in Europe
