Science and Civilisation in China: Volume 3, Mathematics and the Sciences of the Heavens and the Earth Joseph Needham, 1959 After two volumes mainly introductory, Dr Needham now embarks upon his systematic study of the development of the natural sciences in China. The Sciences of the Earth follow geography and cartography, geology, seismology and mineralogy. Dr Needham distinguishes parallel traditions of scientific cartography and religious cosmography in East and West, discussing orbocentric wheel maps, the origins of the rectangular grid system, sailing charts and relief maps, Chinese survey methods and the impact of Renaissance cartography on the East. Finally, and here, Dr Needham's work has no Western predecessors; there are full accounts of the Chinese contribution to geology and mineralogy. **The Engineers' Digest**, 1953 *The School News and Practical Educator*, 1899 **The penny cyclopædia [ed. by G. Long]**. Society for the diffusion of useful knowledge, 1858 *California Education*, 1914 **Novel Bioderived Composites from Wastes** Andrea Petrella, Marco Race, Danilo Spasiano, 2020-11-20 The recovery of solid wastes for the preparation of innovative composite materials not only represents an economic advantage but also offers an ecological opportunity for the utilization of by-products which would otherwise be landfilled. Specifically, the reuse and recycling of waste lead to important savings of raw materials and energy since these by-products generally derive from agricultural or industrial activities, which are abundant in nature. Moreover, a reduction of the environmental and related sanitary impacts can be also achieved. For this reason, a recycling operation is fundamental for the improvement of the environmental sustainability because these secondary raw materials become a resource that can be easily reused without the modification of the peculiar characteristics in order to obtain new and performing composites with a low specific weight, high durability and long life cycle.
