*Methods and Concepts for Designing and Validating Smart Grid Systems* Thomas I. Strasser, Sebastian Rohjans, Graeme M. Burt, 2019-11-20 Energy efficiency and low carbon technologies are key contributors to curtailing the emission of greenhouse gases that continue to cause global warming The efforts to reduce greenhouse gas emissions also strongly affect electrical power systems Renewable sources storage systems and flexible loads provide new system controls but power system operators and utilities have to deal with their fluctuating nature limited storage capabilities and typically higher infrastructure complexity with a growing number of heterogeneous components In addition to the technological change of new components the liberalization of energy markets and new regulatory rules bring contextual change that necessitates the restructuring of the design and operation of future energy systems Sophisticated component design methods intelligent information and communication architectures automation and control concepts new and advanced markets as well as proper standards are necessary in order to manage the higher complexity of such intelligent power systems that form smart grids Due to the considerably higher complexity of such cyber physical energy systems constituting the power system automation protection information and communication technology ICT and system services it is expected that the design and validation of smart grid configurations will play a major role in future technology and system developments However an integrated approach for the design and evaluation of smart grid configurations incorporating these diverse constituent parts remains evasive The currently available validation approaches focus mainly on component oriented methods In order to guarantee a sustainable affordable and secure supply of electricity through the transition to a future smart grid with considerably higher complexity and innovation new design validation and testing methods appropriate for cyber physical systems are required Therefore this book summarizes recent research results and developments related to the design and validation of smart grid systems

Control in Power Electronics and Electrical Drives R. Zwick, 2014-06-28 Contains 97 papers which provide a valuable overview of the latest technical innovations in this rapidly expanding field Areas of development which receive particular attention include the emergence of power switching transistors the application of microprocessors to regulation and control of static converters and electrical drives the use of more sophisticated control strategies and the utilization of power electronics in new application fields

*Energy Storage Systems and Power Conversion Electronics for E-Transportation and Smart Grid* Sergio Saponara, Lucian Mihet-Popa, 2020-12-02 This is a reprint in book form of the Energies MDPI Journal Special Issue entitled Energy Storage Systems and Power Conversion Electronics for E-Transportation and Smart Grid The Special Issue was managed by two Guest Editors from Italy and Norway Professor Sergio Saponara from the University of Pisa and Professor Lucian MIHET POPA from stfold University College in close cooperation with the Editors from Energies The papers published in this SI are related to the emerging trends in energy storage and power conversion electronic circuits and systems with a specific focus on transportation electrification and on the evolution

from the electric grid to a smart grid An extensive exploitation of renewable energy sources is foreseen for the smart grid as well as a close integration with the energy storage and recharging systems of the electrified transportation era Innovations at the levels of both algorithmic and hardware i e power converters electric drives electronic control units ECU energy storage modules and charging stations are proposed Research and technology transfer activities in energy storage systems such as batteries and super ultra capacitors are essential for the success of electric transportation and to foster the use of renewable energy sources Energy storage systems are the key technology to solve these issues and to increase the adoption of renewable energy sources in the smart grid
