Understanding Psychological Assessment William I. Dorfman, Michel Hersen, 2013-11-11 Introductory texts on psychological testing and evaluation historically are not in short supply Typically however such texts have been relatively superficial in their discussion of clinical material and have focused primarily on the theoretical and psychometric properties of individual tests More practical clinically relevant presentations of psychological instruments have been confined to individual volumes with advanced and often very technical information geared to the more sophisticated user Professors in introductory graduate courses are often forced to adopt several advanced texts to cover the material at the same time helping students wade through unnecessary technical information in order to provide a basic working knowledge of each

Psychology C. Eugene Walker,2013-11-21 The purpose of this book is to provide the reader with a survey of some of the major areas of clinical psychology No attempt has been made to include every area relevant to clinical psychology the choices are selective but represent the wide range of areas touched by clinical psychologists For some years I have felt the need for a

book that provides students with more of a historical introduction and context from which to view current clinical psychology than is included in most textbooks. The issues and problems of clinical psychology have been with us since the beginning of time; however, most psychological literature is written with the bias that anything older than five or ten years is not relevant. Those who attempt to take a long range view of clinical psychology are sometimes able to recall the early development of the field in the 1930s and 1940s. In this text I asked the authors to begin with a brief survey of ancient and medieval history to set the stage for a discussion of current research and developments in the field. I hope that a presentation of this sort will provide the reader, whether advanced undergraduate, graduate, or professional, with a sense of perspective and context from which to view and understand clinical psychology.

Biological Bases of Individual Behavior V. D. Nebylitsyn, J. A.

Gray, 2013-09-24 *Biological Bases of Individual Behavior* contains a mixture of papers from East and West. The book can be organized into two parts. The articles in the first part, which might broadly be termed physiological, examine a number of questions relating to the physiological constitution and to methods of measuring the properties of the nervous system. This section opens with one of Teplov's last papers, which contains a lucid exposition of the main results of research carried out in 1964 in the laboratory he directed. The other articles in this section elucidate the use of electroencephalographic and Chronometrie methods of studying the properties of the nervous system, examine problems of sensitivity and partiality in the manifestation of the basic properties, and present the results of experiments conducted to study the correlations between certain properties of the nervous system and features of the human constitution, as well as between age and neurodynamic factors. The second part of the volume may be described as psychophysiological. It consists of articles which examine the possible physiological mechanisms of individual psychological features of behavior. Many are devoted to either experimental or theoretical analysis of the neurophysiological bases of the personality dimension of extraversion-introversion.

The Handbook of Narcissism and Narcissistic Personality Disorder W. Keith Campbell, Joshua D. A STUDY OF VALUES OF SECONDARY SCHOOL TEACHERS IN RELATION TO THEIR COMPETENCE, ATTITUDE TOWARDS PROFESSION AND PERSONALITY Prin. Dr. Shivakumar S. Ganapur, 2019-06-06

Value is something which pervades everything It determines the meaning of the world as a whole as well as the meaning of every person every event and every action Even the smallest change introduced into the world by an agent has a value and is undertaken only on the ground and for the sake of some value moments Everything that exists and even everything that may exist or in anyway belong to the composition of the world is of such nature that it not only exists but also contains within itself either the justification or condemnation of its being It can be said of everything that is either good or bad it can be said whether it must or must not be or that it ought not to exist that its existence is right or wrong not in the judicial sense This is the view expressed by Lossky and Marshall in the year 1935 in presenting the broad view of values
