

1956 Ford F100/250 Windshield Wiper and Heater/Defroster wiring

Electric windshield wipers are driven by a wiper motor mounted on the top center of the cowl in the engine bay. The wiper motor has a three wire harness that enters the cab through a dedicated hole in the firewall adjacent to the motor, running to the wiper switch on the dashboard. The #18 red wire connects to the bottom "A" post, the #18 green wire connects to the side "F" post, and the #18 black wire connects to the side "P" post. The red and green wires support two speed motor operation, while the #18 black wire supports the parking function of the wipers. A #16 yellow wire carries 12V power from the ignition switch "ACC" post through an inline fuse to the wiper switch "B" post. The wiper switch is a twist design, with OFF-LOW-HIGH positions.

The heater blower motor is mounted behind the cab heater box and the motor body extends into the engine bay through the firewall. A two wire harness from the motor enters the cab through a dedicated hole in the firewall and runs to the heater control switch. The heater control switch is mounted on a bracket beneath the dash, with a half moon shaped opening in the switch bracket keeping the switch from rotating and ensuring the correct orientation. The #18 red wire connects on the driver's side of the switch, to the rear. The #18 orange wire connects next to the red wire on the driver side of the switch. The #16 black wire carries 12V power from the ignition switch "ACC" post through an inline fuse to the heater switch, connecting to the passenger side of the switch (the only side with a single connection). The heater switch is a push-pull design, with OFF-LOW-HIGH positions.
