

For you performance specialists, \$95 buys a comprehensive kit that bumps displacement to a full 100cc and horsepower to 15 at 9500 rpm.

has pinch bolts to minimize fork shaft twist, as does the steel lower yoke. This double pinch bolt arrangement is necessary to keep the front end from flexing like a springboard after a few miles in the rough. The suspension units are sealed DeCarbon types with progressively wound chrome-plated springs.

Eighteen-inch chromed rims are spoked to aluminum hubs front and rear, and brake drum diameters are equal at both ends. For serious off-road excursions a 21-inch front wheel would be a wise option. The standard fork angle of 30 degrees is right in line with that of the best available boondockers. Couple this proven dimension with the increased stability of a 21-inch wheel and the results would border on perfection. The only drawback is the short wheelbase. An increase of three to four inches would give the TS-90 equal footing with any machine its size regardless of price.

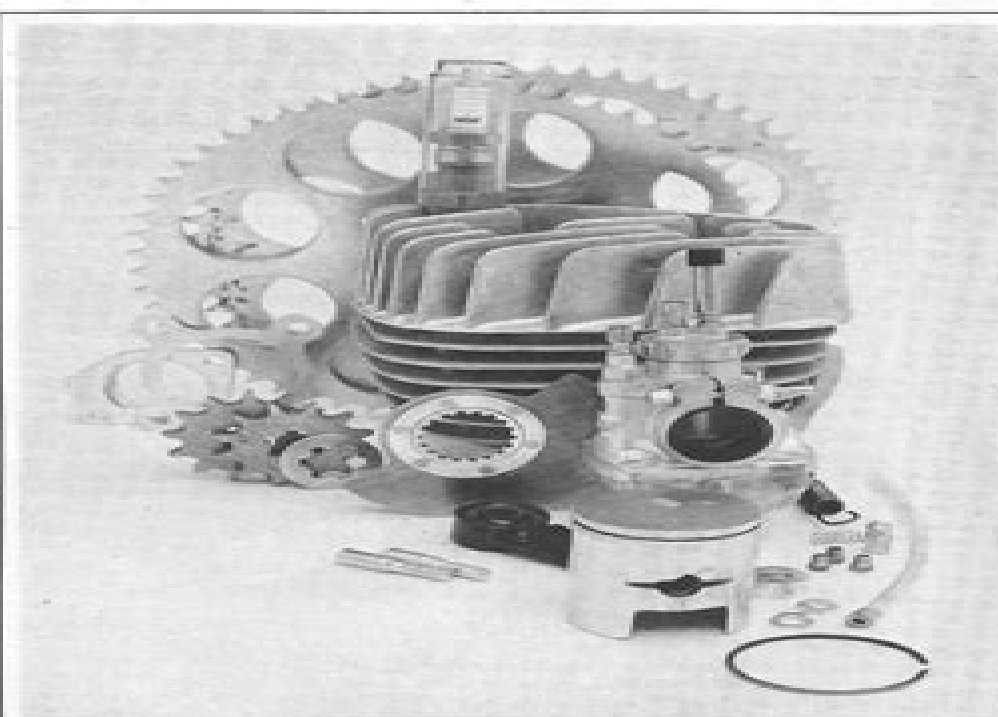

The rider's leg is protected from the up-swept one-piece exhaust by a chromed guard. A U.S. Forestry-approved spark arrester is built into the muffler. The silencer baffle can be removed for cleaning, but will hamper the engine's performance if not replaced. The air cleaner is big enough for a 250, and is tucked up out of the path of water and dirt. The filtering element is replaceable automotive-type waterproof pleated paper. A two-stroke engine needs a large volume of air to operate efficiently; the Homcho's cleaner is more than enough to handle twice the 90's displacement.

The engine unit is canted slightly forward in the frame. This position exposes the cylinder head to the oncoming wind stream at an optimum angle for cooling. The aluminum head has diagonally-placed fins to direct air flow towards the hot area around the spark plug. Another aid in controlling engine temperature is the black finish on the cylinder.

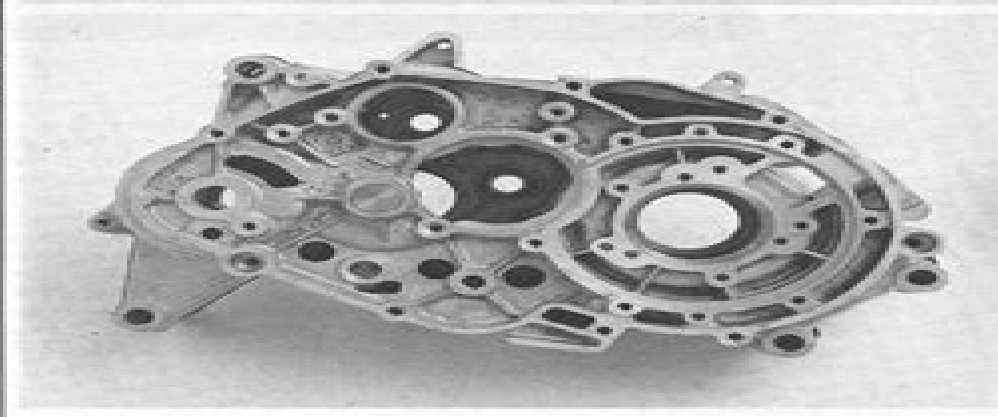

Four $\frac{5}{16}$ -inch diameter studs pass through the head and cast-iron cylinder, rigidly connecting the top end to the die-cast aluminum crankcases. The crankshaft assembly is supported by ball bearings; the crankpin and wristpin ride on rollers. Primary drive is by helical-cut gears sharing a common oil supply with the five-speed transmission gearset. Clutch hub end thrust is taken care of by a needle thrust washer, and both transmission shafts ride on ball bearings. This is a fairly common engineering practice among today's major two-stroke manufacturers.

One of the engineering highlights of the Suzuki 90 is its outstanding oil supply system. In the majority of the mass-produced

Kit parts: a new cylinder, head, rotary valve, piston, carb, plug, exhaust system, jets, gaskets, and sprockets.

The crankshaft assembly is supported on ball bearings so are both transmission shafts.
