*Oriented Magnetic Field Measurements during IODP Expedition 330 to the Louisville Seamount Chain* Sebastian Ehmann, 2016-12-19 Das Thema dieser Doktorarbeit ist die Reorientierung und Auswertung von vektorialen Magnetfelddaten, die in zwei Bohrungen während der IODP Expedition 330 zu den Louisville Seamounts aufgezeichnet wurden. Ein Ziel der Expedition war festzustellen, ob sich der Louisville Hotspot relativ zu dem Hawaiian Emperor Hotspot im Erdmantel bewegt oder ob er stationär ist. Für die Magnetfeldmessungen wurde das Göttinger Bohrlochmagnetometer verwendet, dessen faseroptische Kreisel in der Lage sind, die Drehungen der Sonde im Bohrloch zu bestimmen, wodurch das gemessene Magnetfeld aus dem Bezugssystem der Sonde in das geographische Koordinatensystem reorientiert werden kann. Es werden verschiedene Algorithmen vorgestellt, die auf unterschiedliche Art und Weise die vorhandenen Sensoren kombinieren, um die Daten bestmöglich zu orientieren. Weiterhin werden verschiedene Schichtmodelle verwendet, um die Richtung der Gesteinsmagnetisierung aus den Magnetfelddaten zu bestimmen, wobei auf Uneindeutigkeiten und Messfehler eingegangen wird. Die Ergebnisse dieser Modellierungen unterstützen die Annahme eines stationären Louisville Hotspots.

**Antarctic Peninsula Region of the Southern Ocean** Eugene G. Morozov, Mikhail V. Flint, Vassily A. Spiridonov, 2022-01-01 The book is based on results from the Russian expedition in the region of the Antarctic Peninsula and Powell Basin in the northern part of the Weddell Sea, as well as on the review of earlier research in the region. The main goal of the research was to collect the newest data and study the physical properties and ecology of this key region of the Southern Ocean. Data analysis is supplemented with numerical modeling of the atmosphere-ocean interaction and circulation in the adjacent region, including research on rogue waves. The focus of the study was the Antarctic Circumpolar Current, currents and water properties in the Bransfield Strait and Antarctic Sound, properties of seawater, currents, ecosystem, and biological communities in the Powell Basin of the northwestern Weddell Sea, and their variations. An attempt is made to reveal the role of various components of the Antarctic environment in the formation of biological productivity and maintenance of the Antarctic krill population. This is especially important as in the last decades the Antarctic environment has experienced significant changes related to the global climatic trends.

**Native American Nationalism and Nation Re-building**  
Simone Poliandri, 2016-05-01 Bringing together perspectives from a variety of disciplines, this book provides an interdisciplinary approach to the emerging discussion on Indigenous nationhood. The contributors argue for the centrality of

nationhood and nation building in molding and concurrently blending the political social economic and cultural strategies toward Native American self definitions and self determination Included among the common themes is the significance of space conceived both as traditional territory and colonial reservation in the current construction of Native national identity Whether related to historical memory and the narrativization of peoplehood the temporality of indigenous claims to sovereignty or the demarcation of successful financial assets as cultural and social emblems of indigenous space territory constitutes an inalienable and necessary element connecting Native American peoplehood and nationhood The creation and maintenance of Native American national identity have also overcome structural territorial impediments and may benefit from the inclusivity of citizenship rather than the exclusivity of ethnicity In all cases the political effectiveness of nationhood in promoting and sustaining sovereignty presupposes Native full participation in and control over economic development the formation of historical narrative and memory the definition of legality and governance SUNY Press has collaborated with Knowledge Unlatched to unlock KU Select titles The Knowledge Unlatched titles have been made open access through libraries coming together to crowd fund the publication cost Each monograph has been released as open access making the eBook freely available to readers worldwide Discover more about the Knowledge Unlatched program here <https://www.knowledgeunlatched.org> and access the book online at the SUNY Open Access Repository at <http://hdl.handle.net/20.500.12648/8474>

**Running Out** Lucas Bessire, 2022-10-04 Finalist for the National Book Award An intimate reckoning with aquifer depletion in America's heartland The Ogallala aquifer has nourished life on the American Great Plains for millennia But less than a century of unsustainable irrigation farming has taxed much of the aquifer beyond repair The imminent depletion of the Ogallala and other aquifers around the world is a defining planetary crisis of our times *Running Out* offers a uniquely personal account of aquifer depletion and the deeper layers through which it gains meaning and force Anthropologist Lucas Bessire journeyed back to western Kansas where five generations of his family lived as irrigation farmers and ranchers to try to make sense of this vital resource and its loss His search for water across the drying High Plains brings the reader face to face with the stark realities of industrial agriculture eroding democratic norms and surreal interpretations of a looming disaster Yet the

destination is far from predictable as the book seeks to move beyond the words and genres through which destruction is often known. Instead, this journey into the morass of eradication offers a series of unexpected discoveries about what it means to inherit the troubled legacies of the past and how we can take responsibility for a more inclusive, sustainable future. An urgent and unsettling meditation on environmental change, *Running Out* is a revelatory account of family complicity, loss, and what it means to find your way back home. *Narrative, Interrupted* Markku Lehtimäki, Laura Karttunen, Maria Mäkelä, 2012-08-31

Recent postclassical narratology has constructed top-down reading models that often remain blind to the frame-breaking potential of individual literary narratives. *Narrative Interrupted* goes beyond the macro framing typical of postclassical narratology and sets out to sketch approaches more sensitive to generic specificities, disturbing details, and authorial interference. Unlike the mainstream cognitive approaches or even the emergent unnatural narratology, the articles collected here explore the artifice involved in presenting something ordinary and realistic in literature. The first section of the book deals with anti-dynamic elements such as dialogue, details, private events, and literary boredom. The second section, devoted to extensions of cognitive narratology, addresses spatiotemporal oddities and the possibility of non-human narratives. The third section focuses on frame-breaking fragmentarity and problems of authorship in the works of Vladimir Nabokov. The book presents readings of texts ranging from the novels of Don DeLillo and Thomas Pynchon to the *Animal Man* comics. The common denominator for the texts discussed is the interruption of the chain of events or of the experiential flow of human-like narrative agents.

**A Concise Guide to Geopressure** Peter B. Flemings, 2021-03-25

Geopressure drives fluid flow and is important for hydrocarbon exploration, carbon sequestration, and designing safe and economical wells. This concise guide explores the origins of geopressure and presents a step-by-step approach to characterizing and predicting pressure and least principal stress in the subsurface. The book emphasizes how geology and particularly the role of flow along permeable layers drives the development and distribution of subsurface pressure and stress. Case studies such as the Deepwater Horizon blowout and laboratory experiments are used throughout to demonstrate methods and applications. It succinctly discusses the role of elastoplastic behaviour, the full stress tensor, and diagenesis in pore pressure generation and it presents workflows to predict pressure, stress, and hydrocarbon entrapment. It is an essential guide for academics and professional geoscientists and petroleum engineers interested in predicting pressure and stress and understanding the role of geopressure in geological processes, well design, hydrocarbon entrapment, and carbon sequestration.
