**Flood Hazard Identification and Mitigation in Semi- and Arid Environments** Richard H. French,Julianne J. Miller,2012 Alluvial fans are ubiquitous geomorphological features that occur throughout the world regardless of climate at the front of mountains as the result of erosion and deposition They are more prominent in semi and arid climates simply because of the lack of vegetative cover that masks their fan shapes in more humid areas From both engineering and geological viewpoints alluvial fans present particular fluvial and sedimentation hazards in semi and arid regions because episodic rainfall runoff events can result in debris mud and fluvial flows through complex and in some cases migratory channel systems Further in semi and arid climates alluvial fans often end in terminal or playa lakes Given the uniform topography of playa lakes these features often present ideal locations for facilities such as airports however regardless of the engineering advantages of the topography the episodic and often long term flooding of these lakes attracts migratory birds

The purpose of this volume is to summarize the current state of the art from the viewpoint of engineering in the identification and mitigation of flood hazard on alluvial fans and to accomplish this a fundamental understanding of geology is required
