**Use of Concurrent Tasks for Effective Structural Control Modeling** Mark Edward Wolschon, 1993 Finite Element Analysis of Active and Sensory Thermopiezoelectric Composite Materials Ho-Jun Lee, 2000 Analytical formulations are developed to account for the coupled mechanical electrical and thermal response of piezoelectric composite materials The coupled response is captured at the material level through the thermopiezoelectric constitutive equations and leads to the inherent capability to model both the sensory and active responses of piezoelectric materials A layerwise laminate theory is incorporated to provide more accurate analysis of the displacements strains stresses electric fields and thermal fields through the thickness Thermal effects which arise from coefficient of thermal expansion mismatch pyroelectric effects and temperature dependent material properties are explicitly accounted for in the formulation Corresponding finite element formulations are developed for piezoelectric beam plate and shell elements to provide a more generalized capability for the analysis of arbitrary piezoelectric composite structures The accuracy of the current formulation is verified with comparisons from published experimental data and other analytical models Additional numerical studies are also conducted to demonstrate additional capabilities of the formulation to represent the sensory and active behaviors A future plan of experimental studies is provided to characterize the high temperature dynamic response of piezoelectric composite materials
