

## Covalent Bonding Worksheet

Covalent bonding occurs when two or more NON\_METALS share electrons, attempting to attain a stable octet (8 outer electrons) in their outer shell for at least part of the time. Draw a Lewis dot diagram for each element listed. Circle the unpaired electrons that will be shared between the elements.

1.)  $H_2$  hydrogen is diatomic:

2.)  $F_2$  fluorine is diatomic:

3.)  $O_2$  oxygen is diatomic:

4.)  $N_2$  nitrogen is diatomic. Is this a triple bond?

5.)  $BF_3$  you need 3 fluorine atoms here:

6.) Ammonia  $NH_3$  hint: how many hydrogen atoms are needed?

7.) Carbon dioxide  $CO_2$

8.) Methane  $CH_4$  careful here 4 hydrogen atoms needed

9.) Dihydrogen monoxide: the most dangerous substance on the planet. It has killed more people than any other substance known to mankind!!

10.)  $SO_2$  hint: one pair of electrons from sulfur must be slit up for this one to work.

arises when the book is written by authors that are not food scientists e.g. chemists they are not academics that are engaged with teaching or they are not sufficiently qualified to teach. In this case it is difficult to find links between the chemistry of foods and its relevance to applications or quite frequently future employment prospects of the student. Introduction to Food Chemistry 2nd Edition bridges this gap in the relevant literature as it employs the latest pedagogical theories in textbook writing to present the subject to students with a broad range of cognitive skills. This book presents specific learning objectives for each chapter and is self-contained so students will not need to search for essential information outside the textbook. This new edition has been expanded to include chapters on sweeteners, glass transition, amino acids, proteins for major food commodities and food additives. All of the original chapters have been updated and expanded to include new research and technologies. To support learning, the book has didactic elements with information being conveyed with 3D figures, color-coded schemes and graphs, annotations on figures that link it to the text descriptions. Built-in pedagogy and learning activities at the end of each chapter that are linked to the learning objectives. Keywords and concepts for online search to instigate curiosity for further studies. Conversational writing style without losing academic rigor. To support lecturers, the book has helps focus teaching preparation on key aspects of food chemistry relevant to both industry and modern research. Aids the preparation of exams, assignments and other types of assessment or learning activities. For lecturers in search of a singular source to aid in their introductory food chemistry courses, look no further than this expanded new edition of Introduction to Food Chemistry.
