Computer-Based Management of Complex Systems Peter M. Milling, Erich O.K. Zahn, 2012-12-06. Especially during the last decade the systems approach gained wide spread attention and increased influence in the world of academics and business. The holistic view of how individual elements interact with each other to form an entity not a collection of isolated parts becomes more and more important. Whether it is called integration as in Computer Integrated Manufacturing, organism in ecological studies or network like the communication network it is the system's idea which opens new dimensions for insights, applications and development. System Dynamics or Industrial Dynamics as it was called during its early years by its founder and mentor MIT's now Professor Emeritus Jay W. Forrester pioneered the use of system concepts and computer simulation for the analysis of complex problems in business and management. It was applied to study the dynamics of corporations, cities, national economies and finally the global problems of man and in his limited and fragile environment. The field has reached a stage of self sustained development and momentum. A few years ago the System Dynamics Society was founded, a high quality academic journal is now published in its fifth volume and the annual International Conferences of the Society were institutionalized and took place in America, Europe and Asia. The organization of international meetings for this scientific community however is older than the System Dynamics Society itself. The first conventions were held as special sections of conferences devoted to simulation or cybernetics.

Advanced Conceptual Modeling Techniques Antoni Olivé, Masatoshi Yoshikawa, Eric S.K. Yu, 2003-10-25. The objective of the workshops held in conjunction with ER 2002, the 21st International Conference on Conceptual Modeling, was to give participants the opportunity to present and discuss emerging hot topics thus adding new perspectives to conceptual modeling. To meet this objective we selected the following four workshops: 2nd International Workshop on Evolution and Change in Data Management (ECDM 2002), ER IFIP 8.1 Workshop on Conceptual Modelling Approaches to Mobile Information Systems Development (MobIMod 2002), International Workshop on Conceptual Modeling Quality (IWCMQ 2002), 3rd International Joint Workshop on Conceptual Modeling Approaches for E-business: a Web Service Perspective (eCOMO 2002). ER 2002 was organized so that there would be no overlap between the conference sessions and the workshops. This proceedings contains workshop papers that were revised by the authors following discussions during the conference. We are deeply indebted to the members of the organizing committees and program committees of these workshops for their hard work. July 2003. Antoni Olivé, Masatoshi Yoshikawa and Eric S.K. Yu. Workshop Co-chairs. ER 2002. ECDM 2002. Change is a fundamental but sometimes neglected aspect of information and database systems. The management of evolution and change and the ability of database information and knowledge based systems to deal with change is an essential component in developing and maintaining truly useful systems.

Many approaches to handling evolution and change have been proposed in various areas of data management and this forum seeks to bring together researchers and practitioners from both more established areas and from emerging areas to look at this issue **Defense Logistics Management System, (DLMS), Version 2.0, DoD 4000.25-M, December 1995**, 1995
