

Chemistry 1 Activity Series Lab

Name: _____

BASIC KNOWLEDGE INFORMATION

We have been discussing single displacement reactions and the activity series. Remember if the less active metal is above the metal in the compound in the activity series, then the reaction WILL HAPPEN. If the more active is below the metal in the compound in the activity series, then the reaction will NOT happen.

For example: Zinc solid plus iron chloride, $\text{Fe (s)} + \text{FeCl}_2 \text{ ---} \rightarrow \text{Fe(s)} + \text{ZnCl}_2$

The reaction happened because zinc is above iron in the activity series.

PROBLEM

What is the order of reactivity of the metals: copper, magnesium, and zinc in a single displacement reaction?

REACTANTS:

- Magnesium
- Small pieces of aluminum, zinc, iron, and copper metal
- Aqueous solutions of hydrochloric acid, copper (II) sulfate, zinc chloride, iron (III) chloride

LAB IT!

- Wear goggles
- Hydrochloric acid is corrosive
- Wipe up all spills immediately in the waste bucket.

PROCEDURE

1. Record the appearance of each metal in the chart on the next page.
2. Add 10 drops of 1 M hydrochloric acid to each well plate designated below.
3. Add a small piece of the metal in each of a small specimen:
 - a. For example, the first row you should examine should be zinc metal and hydrochloric acid.
 - b. The others would be to complete all the reactions for one metal, then move onto the next metal.
 - c. Record everything that you observe from writing and balancing the chemical equations later!
4. Record any change in appearance due to a chemical reaction.
 - a. Reactions of metals with acid, look carefully for the formation of bubbles.
5. Wipe up all the solutions in the waste bucket supplied by Mr. Campbell. Don't pour anything down the drain!
