Adaptation And Mitigation Strategies For Climate Change:

Adaptation and Mitigation Strategies for Climate Change Akimasa Sumi, Kensuke Fukushi, Ai Hiramatsu, 2010-03-11 In recent decades there has been a growing awareness of how intricate the interactions are between human beings and the environment. Fortunately, progress has been made in understanding this relationship and new technologies have been effective in addressing environmental problems. However, belatedly, there has been an acknowledgment of the incompatibility of the world's finite resources with humankind's increasingly greater needs for them and of how such a challenge demands broadened collaboration among engineers, social scientists, politicians, and financial powers. Global agreement that the essential issues of the twenty-first century cannot be solved by any one discipline has led to the concept of sustainability. The transdisciplinary contributions selected for inclusion in this book address these concerns with an overview of the diverse fields of study related to sustainability. This collection of work is intended to pave the way for further collaboration among scientists and nations as well. Agriculture and Climate Clyde W. Fraisse, Making Climate Change Work for Us Henry Neufeldt, 2012-09-27 Introducing the main challenges and opportunities of developing local, regional, and global strategies for addressing climate change, this book explains the dilemmas faced when converting strategies into policies. Providing a synthesis of the findings of the three-year European Commission ADAM Adaptation and Mitigation Strategies research project and written by many leading interdisciplinary climate change research teams, European strategies for tackling climate change are placed within a global context. The book illustrates the differences between adaptation and mitigation, offers regional and global case studies of how adaptation and mitigation are interlinked, and suggests six different metaphors for the strategic options to make climate change work for us rather than against us. Offering practical solutions to climate change both adaptation and mitigation within the policy contexts in which these solutions have to be implemented, this book is valuable for researchers in varied related fields as well as policymakers in government, industry, and NGOs.

Integrating adaptation and mitigation in climate change and land-use policies in Peru Emilia Pramova, Monica Di Gregorio, Bruno Locatelli, 2015-06-09 The interactions between climate change adaptation and mitigation are particularly evident in agriculture, forestry, and other land use based

activities Adaptation projects can affect ecosystems and their ability to sequester and store carbon while mitigation projects can enhance adaptive capacity or increase the vulnerability of people These interactions must be considered when designing policies and strategies The discussion on policy integration of climate change adaptation and mitigation should focus on two issues 1 integrating adaptation and mitigation in climate change policies to consider multiple goals assess trade offs and seek mutually supportive outcomes and 2 integrating adaptation and mitigation jointly into sectoral policies such as agriculture or forestry in order to balance trade offs and maximize co benefits between climate change and other objectives National strategies and plans related to climate change in Peru as well as key land use policies encompass both adaptation and mitigation objectives Frameworks have been developed for the integrated implementation of adaptation and mitigation in the new National Climate Change Strategy and draft National Forests and Climate Change Strategy Although most of the other strategies and action plans do not mention the joint implementation of adaptation and mitigation they do emphasis delivery of ecosystem services And enhancing ecosystem services can ultimately benefit both adaptation and mitigation and other national priorities What is needed is a strong focus on information and knowledge generation and management and an assessment of the current and potential impacts of national and subnational policies on ecosystem services at different scales Establishing mechanisms for monitoring and evaluating policy implementation stakeholder engagement and adaptive management are also crucial
