Teaching Middle School Science Smithsonian Institution, National Academy of Engineering, National Science Resources Center of the National Academy of Sciences, Institute of Medicine, 1998-04-30 With age appropriate inquiry centered curriculum materials and sound teaching practices middle school science can capture the interest and energy of adolescent students and expand their understanding of the world around them Resources for Teaching Middle School Science developed by the National Science Resources Center NSRC is a valuable tool for identifying and selecting effective science curriculum materials that will engage students in grades 6 through 8 The volume describes more than 400 curriculum titles that are aligned with the National Science Education Standards This completely new guide follows on the success of Resources for Teaching Elementary School Science the first in the NSRC series of annotated guides to hands on inquiry centered curriculum materials and other resources for science teachers The curriculum materials in the new guide are grouped in five chapters by scientific area Physical Science Life Science Environmental Science Earth and Space Science and Multidisciplinary and Applied Science They are also grouped by type core materials supplementary units and science activity books Each annotation of curriculum material includes a recommended grade level a description of the activities involved and of what students can be expected to learn a list of accompanying materials a reading level and ordering information The

curriculum materials included in this book were selected by panels of teachers and scientists using evaluation criteria developed for the guide. The criteria reflect and incorporate goals and principles of the National Science Education Standards. The annotations designate the specific content standards on which these curriculum pieces focus. In addition to the curriculum chapters, the guide contains six chapters of diverse resources that are directly relevant to middle school science. Among these is a chapter on educational software and multimedia programs, chapters on books about science and teaching, directories and guides to science trade books and periodicals for teachers and students. Another section features institutional resources. One chapter lists about 600 science centers, museums, and zoos where teachers can take middle school students for interactive science experiences. Another chapter describes nearly 140 professional associations and U.S. government agencies that offer resources and assistance. Authoritative, extensive, and thoroughly indexed, and the only guide of its kind, *Resources for Teaching Middle School Science* will be the most used book on the shelf for science teachers, school administrators, teacher trainers, science curriculum specialists, advocates of hands-on science teaching, and concerned parents.

The Earth's Land Surface Kenneth J. Gregory, 2010-03-23. Given the sheer scale of the topic under consideration here, Professor Gregory does well to condense it into bite-size pieces for the reader. I recommend this text to all undergraduate students of physical geography and earth sciences, particularly to those in their first and second years. This book is a comprehensive and crucially inexpensive text that will provide students with a useful source on geomorphology. Lynda York, *The Geographical Journal*. I would highly recommend this to anyone doing geology or geography at university as a go-to book for geomorphology and landform. Sara Falcone, *Teaching Earth Science*. An excellent source of information for anyone who needs a well-informed, easy-to-use reference volume to introduce them to the fascinating complexities of the earth's land surface, past, present, and future. Angela Gurnell, Queen Mary University of London. This introductory text details the land surface of the earth in a readable style, covering the major issues, key themes, and sensitivities of the environment's landscape. Emphasising the major ideas and their development, each chapter includes case studies and details of influential scientists, not necessarily geomorphologists who have contributed to the progress of understanding. Providing a very clear explanation of the understanding achieved and of the debates that have arisen, the book is comprised of 12 chapters in four sections. *Visualising the land surface* explains and explores the composition of the land surface and outlines how it has been studied. *Dynamics of the land surface* considers the dynamics affecting the earth's land surface, including its influences, processes, and the changes that have occurred. *Environments of the land surface* looks to understand the land surface in major world regions, highlighting differences between the areas. *Management of the land surface* is an examination of the current and future prospects of the management of the earth's land surface. With pedagogical features including further reading, questions for discussion, and a glossary, this original, lively text is authored by one of the leading experts in the field and will be core reading for first and second year undergraduates on all physical geography courses.
