Advanced Timber Structures Yves Weinand, 2016-12-19 Wood is usually perceived as a traditional material. However, the properties of this material have now for some time made it possible to design free shapes and highly complex structures. Today, the wood laboratory of the EPF Lausanne, which was originally founded by Julius Natterer, is testing the production of origami structures, ribbed shells, fabric structures and curved panels under the guidance of Professor Weinand using digital calculation and computer-aided processing methods. The research results are tested in prototypes which demonstrate the potential applications in large-scale timber buildings. By exploring the hitherto unused potential of wood as a construction material, this book provides an exciting and inspiring outlook on a new generation of timber buildings. *11th International Conference on Turbochargers and Turbocharging* IMechE, 2014-08-25 The future market forces and environmental considerations in the passenger car and commercial vehicle sector mean more stringent engine downsizing is far more prevalent. Therefore, novel systems are required to provide boosting solutions including hybrid electric motor and exhaust waste energy recovery systems for high efficiency, response, reliability, durability and compactness. The current emission legislations and environmental trends for reducing CO<sub>2</sub> and fuel consumption are the major market forces in the land and marine transport industries. The internal combustion engine is the key product and downsizing, efficiency and economy are the driving forces for development for both spark ignition (SI) and compression ignition (CI) engines in both markets. Future market forces and environmental considerations for transportation specifically in the passenger car, commercial vehicle and the marine sectors mean more stringent engine downsizing. This international conference is the latest in the highly successful and prestigious series held regularly since 1978. These proceedings from the Institution's highly successful and prestigious series address current and novel aspects of turbocharging systems, design, boosting solutions for engine downsizing and improvements in efficiency and present the latest research and development in this growing and innovative area. Focuses on boosting solutions including hybrid electric motor and exhaust waste energy recovery systems. Explores the current need for

**Strength Prediction of Adhesively-Bonded Joints** Raul D. S. G. Campilho, 2017-05-25 Adhesively bonded joints provide many advantages over conventional mechanical fasteners and are increasingly receiving attention as an alternative to mechanical joints in engineering applications The traditional fasteners usually result in the cutting of fibers and hence the introduction of stress concentrations both of which reduce structural integrity By contrast bonded joints are more continuous and have potential advantages of strength to weight ratio design flexibility and ease of fabrication This book provides an overview of available analytical methods as well as numerical methods

**Advanced Machining Processes** Angelos P. Markopoulos, J. Paulo Davim, 2017-11-23 Modeling and machining are two terms closely related The benefits of the application of modeling on machining are well known The advances in technology call for the use of more sophisticated machining methods for the production of high end components In turn more complex more suitable and reliable modeling methods are required This book pertains to machining and modeling but focuses on the special aspects of both Many researchers in academia and industry who are looking for ways to refine their work make it more detailed increase their accuracy and reliability or implement new features will gain access to knowledge in this book that is very scarce to find elsewhere
