Industrial Power Systems Shoaib Khan, Sheeba Khan, Ghariani Ahmed, 2018-10-03 The modernization of industrial power systems has been stifled by industry's acceptance of extremely outdated practices. Industry is hesitant to depart from power system design practices influenced by the economic concerns and technology of the post World War II period. In order to break free of outdated techniques and ensure product quality and continuity of operations, engineers must apply novel techniques to plan, design, and implement electrical power systems. Based on the author's 40 years of experience in Industry, *Industrial Power Systems* illustrates the importance of reliable power systems and provides engineers the tools to plan, design, and implement one. Using materials from IEEE courses developed for practicing engineers, the book covers relevant engineering features and modern design procedures, including power system studies, grounding, instrument transformers, and medium voltage motors. The author provides a number of practical tables, including IEEE and European standards and design principles for industrial applications. Long overdue, *Industrial Power Systems* provides power engineers with a blueprint for designing electrical systems that will provide continuously available electric power at the quality and quantity needed to maintain operations and standards of production.

Arc Flash Hazard Analysis and Mitigation J. C. Das, 2012-08-15 Up to date analysis methodologies and practical mitigation for a major electrical safety concern. *Arc Flash Hazard Analysis and Mitigation* is the first book to focus specifically on arc flash hazards and provide the latest methodologies for its analysis as well as practical mitigation techniques. Consisting of sixteen chapters, this fully up to date handbook covers all aspects of arc flash hazard calculations and mitigation. It addresses the calculations of short circuits, protective relaying, and varied electrical systems configurations in electrical power systems. It also examines protection systems, including differential relays, arc flash sensing relays, protective relaying coordination, current transformer operation and saturation, and applications to major electrical equipment from the arc flash point of view. Current technologies and strategies for arc flash mitigation are explored. Using the methodology, analysis, and preventive measures discussed in the book, the arc flash hazard incident energy can be reduced to 8 cal/cm² or less for the new and existing electrical distribution systems. This powerful resource features the most up to date arc flash analysis methodologies. Presents arc flash hazard calculations in dc systems. Supplies practical examples and case studies. Provides end of chapter reviews and questions. Includes a Foreword written by Lanny Floyd, a world renowned leader in electrical safety who is DuPont's Principal Consultant on Electrical Safety and Technology. *Arc Flash Hazard Analysis and Mitigation* is a must have guide for electrical engineers engaged in design, operation, and maintenance, consulting engineers, facility managers, and safety professionals.
