Hijacking History Kathleen Wellman, 2021-08-18 The teaching of history has long been the subject of partisan warfare Religion often plays a prominent role in these debates as secular progressives and conservative Christians disagree over which historical figures are worthy of study how or whether certain events should be portrayed and ultimately how tax dollars should be spent But what about students who are educated outside the public schools either in religious schools or at home How are they learning history and what effect does that have on our democracy *Hijacking History* analyzes the high school world history textbooks produced by the three most influential publishers of Christian educational materials In these books the historian informed by his faith tells the allegedly unbiased story of God's actions as interpreted through the Bible History becomes a weapon to judge and condemn civilizations that do not accept the true God or adopt biblical positions In their treatment of the modern world these texts identify ungodly ideas to be vanquished evolution humanism biblical modernism socialism and climate science among them The judgments found in these textbooks Kathleen Wellman shows are rooted in the history of American evangelicals and fundamentalists and the battles they fought against the tide of secularism In assuming that God sanctions fundamentalist positions on social political and economic issues students are led to believe that that the ultimate mission of America is to succeed as a nation that advances evangelical Christianity and capitalism throughout the world The Christianity presented in these textbooks is proselytizing intolerant of other religions and non evangelical Christians and unquestionably anchored to the political right As *Hijacking History* argues the ideas these textbooks promote have significant implications for contemporary debates about religion politics and education and pose a direct challenge to the values of a pluralistic democracy *Daily Graphic* Elvis D. Aryeh, 1997-05-02 [The Mirror](#) E.N.O. Provencal, 1997-06-07 *Cincinnati Magazine*, 2003-04 Cincinnati Magazine taps into the DNA of the city exploring shopping dining living and culture and giving readers a ringside seat on the issues shaping the region **Einstein's Physics** Ta-Pei Cheng, 2013-01-31 Many regard Albert Einstein as the greatest physicist since Newton What exactly did he do that is so important in physics We provide an introduction to his physics at a level accessible to an undergraduate physics student All equations are worked out in detail from the beginning Einstein's doctoral thesis and his Brownian motion paper were decisive contributions to our understanding of matter as composed of molecules and atoms Einstein was one of the founding fathers of quantum theory his photon proposal through the investigation of blackbody radiation his quantum theory of photoelectric effect and specific heat his calculation of radiation fluctuation giving the first statement of wave particle duality his introduction of probability in the description of quantum radiative transitions and finally the quantum statistics and Bose Einstein condensation Einstein's special theory of relativity gave us the famous $E=mc^2$ relation and the new kinematics leading to the idea of the 4 dimensional spacetime as the arena in which physical events take place Einstein's geometric theory of gravity general relativity extends Newton's theory to time dependent and strong gravitational fields It

laid the ground work for the study of black holes and cosmology This is a physics book with material presented in the historical context We do not stop at Einstein s discovery but carry the discussion onto some of the later advances Bell s theorem quantum field theory gauge theories and Kaluza Klein unification in a spacetime with an extra spatial dimension Accessibility of the material to a modern day reader is the goal of our presentation Although the book is written with primarily a physics readership in mind it can also function as a textbook enough pedagogical support material is provided that anyone with a solid background in introductory physics can with some effort understand a good part of this presentation

Beyond Single Stories Amy Allen, Anne Marie Kavanagh, Caitríona Ní Cassaithe, 2024-02-01 Every social studies curriculum tells a story It is increasingly apparent that new stories are needed to guide us through the multiple and intersecting crises that have come to define our times This accessible volume supports student teachers teachers and teacher educators to engage critically with the stories that social studies curricula tell and neglect to tell particularly those that relate and contribute to the root causes of contemporary social and ecological injustices A balanced and inclusive curriculum necessitates a broad range of stories and perspectives not just the master narratives of dominant groups Incorporating a range of pedagogical approaches and spanning a diversity of themes from representations of Africa in Chinese textbooks to slavery and the American civil rights movement to refugees and the role of indigenous knowledge systems in addressing climate breakdown this volume includes and creatively engages with previously marginalized and silenced stories and perspectives Both practical and theoretical in its approach it seeks to provoke meaningfully support and inspire educators to incorporate alternative stories or counter narratives into their social studies teaching This unique volume is essential reading for student teachers teachers teacher educators as well as anyone interested in inspiring children and young people to be open minded critically engaged and empathetic agents of change committed to addressing realworld social and ecological injustices
