

SECTION 3 AUTOMATIC FLIGHT CONTROL SYSTEM (OPTIONAL)

NOTE: The approved Pilot's Operating Handbook (POH) always supersedes the information in this Pilot's Guide.

NOTE: Refer to the approved Pilot's Operating Handbook (POH) for emergency procedures.

NOTE: A GMC 507 controller is required for GFC 500 AFCS functionality.

3.1 AFCS SYSTEM ARCHITECTURE

An Automatic Flight Control System (AFCS) is typically comprised of two major components: A Flight Director (FD) and Autopilot servos. The Flight Director provides pitch and roll commands to the autopilot servos. These pitch and roll commands are displayed on the PFD Page as Command Bars. When the Flight Director is active the pitch and roll commands can be hand-flown by the pilot or when coupled with the autopilot, the autopilot servos drive the flight controls to follow the commands issued by the Flight Director. The Flight Director operates independently of the autopilot servos, but in most cases the autopilot servos can not operate independent of the Flight Director.

3.1.1 AUTOPILOT AND YAW DAMPER OPERATION

The autopilot and optional yaw damper operate the flight control surface servos to provide automatic flight control. The autopilot controls the aircraft pitch and roll attitudes following commands received from the flight director. Pitch, Roll, and Yaw (if installed) autotrim provides trim commands to each servo to relieve any sustained effort required by the servo(s). Autopilot operation is independent of the optional yaw damper.

The optional yaw damper reduces Dutch roll tendencies, coordinates turns, and provides a steady force to maintain directional trim. It can operate independently of the autopilot and may be used during normal hand-flight maneuvers. Yaw rate commands are limited to 6 deg/sec by the yaw damper.

and follow up sales calls don't provide the immediacy that modern consumers expect. Conversational marketing and sales are part of a new methodology centered around real time one on one conversations with customers via chatbots and messaging. By allowing your business to communicate with customers in real time when it's most convenient for them, conversational marketing improves the customer experience, generates more leads, and helps you convert more leads into customers.

Shawkat Ali, Zahid Riaz, 2014-02-18 This book is dedicated to applied computational intelligence and soft computing techniques with special reference to decision support in Cyber Physical Systems (CPS) where the physical as well as the communication segment of the networked entities interact with each other. The joint dynamics of such systems result in a complex combination of computers, software, networks, and physical processes, all combined to establish a process flow at system level. This volume provides the audience with an in depth vision about how to ensure dependability, safety, security, and efficiency in real time by making use of computational intelligence in various CPS applications ranging from the nano world to large scale wide area systems. Key application areas include healthcare, transportation, energy, process control, and robotics, where intelligent decision support has key significance in establishing dynamic, ever changing, and high confidence future technologies.
