Third Series** Library of Congress. Copyright Office,1979      *Information, Volatility and the Cost of Capital* Tanguy de Launois,2009 We all have in mind a couple of dramatic examples of how information released by some economical or political entity resulted in tremendous consequences for a private company or worst for the whole financial market This is the purpose of this dissertation to investigate the relations between information stock volatility and the cost of capital After the extension of the standard CAPM model to a more realistic world where some investors are constrained and deviate from their optimal CAPM quantities we confront our theoretical model to the empirical reality by investigating the so called index effect Thanks to econometric specifications robust to endogeneity we test different hypotheses proposed by the literature to explain this well known value premium of firms belonging to large indices In a next step we investigate how the quality and quantity of micro and macro public signals impact the main determinants of our pricing equation initially developed We show that in a world of constrained investors firms benefiting from a high deviation have less incentive to communicate than others Finally we study the link between public information and conditional volatility thanks to an original sample of several tens of thousands of Reuters and Dow Jones news releases on both the French and US markets Thanks to various econometric specifications like GARCH models and Markov Switching Regressions we conclude that a larger daily number of news releases increases the probability to be in the high probability regime and that the impact of information is strongly dependent on the topic and the timing of the release of this information      □□□□□□□□ ,1976
