Section: Cell Membrane

Read the passage below. Then answer the questions that follow.

A cell membrane is made of a double layer of **phospholipid** molecules. Each layer is a mirror image of the other layer. The structure is called a **lipid bilayer**.

Located within the lipid bilayer of the cell membrane are proteins of different types. Each type of membrane protein plays a vital role in the life of a cell. Cell-surface markers are membrane proteins that are attached to a carbohydrate on the cell's surface. Together, the protein and carbohydrate help other cells recognize the cell type—liver cell or heart cell, for example. Receptor proteins are membrane proteins that recognize and bind to specific substances outside the cell. When this happens, the inside of the cell changes, as well. In this way, receptor proteins help cells detect and change in response to things in the environment outside the cell. Enzymes are proteins that change the rate of chemical reactions. Various enzymes in the cell membrane are involved in important biochemical reactions inside the cell. Many substances needed inside the cell cannot pass through the cell membrane on their own. Transport proteins are membrane proteins that aid the movement of these substances through the lipid bilayer of the cell membrane. In this way, transport proteins help carry a variety of substances into and out of the cell.

SKILL: USING CONTEXT CLUES

Read each question, and write your answer in the space provided.

1. The prefix *bi-* means “two.” Why is the term *lipid bilayer* a good name for a cell membrane?

2. Why are the proteins described in the second paragraph classified together in a group referred to as membrane proteins?

Medical subject headings **Cell Cycle Checkpoint Control Protocols** Howard B. Lieberman,2008-02-02 The field of cell cycle regulation is based on the observation that the life cycle of a cell progresses through several distinct phases G1 M S and G2 occurring in a well defined temporal order Details of the mechanisms involved are rapidly emerging and appear extraordinarily complex Furthermore not only is the order of the phases important but in normal eukaryotic cells one phase will not begin unless the prior phase is completed successfully Checkpoint control mechanisms are essentially surveillance systems that monitor the events in each phase and assure that the cell does not progress prematurely to the next phase If conditions are such that the cell is not ready to progress for example because of incomplete DNA replication in S or DNA damage that may interfere with chromosome segregation in M a transient delay in cell cycle progression will occur Once the inducing event is properly handled for example DNA replication is no longer blocked or damaged DNA is repaired cell cycle progression continues Checkpoint controls have recently been the focus of intense study by investigators interested in mechanisms that regulate the cell cycle Furthermore the relationship between checkpoint control and carcinogenesis has additionally enhanced interest in these cell cycle regulatory pathways It is clear that cancer cells often lack these checkpoints and exhibit genomic instability as a result Moreover several tumor suppressor genes participate in checkpoint control and alterations in these genes are associated with genomic instability as well as the development of cancer

Ritter,Rod J. Flower,Graeme Henderson,Yoon Kong Loke,David MacEwan,Emma

Robinson, James Fullerton, 2023-05-13 Rang and Dale's Pharmacology is internationally acknowledged as the core textbook for students of pharmacology and has provided accessible up to date information on drugs and their mechanism of action for more than 30 years. Now in its tenth edition it has been updated to include important new drugs such as gene therapies, personalised medicines and the new wave of RNA drugs. However it has not lost any of the elements that have contributed to its popularity such as color coding and illustrations making it reader friendly while comprehensively covering the depth of detail required. This essential book is recommended as the first choice undergraduate text for science and medical students and junior doctors and will also be useful for students in other professional disciplines such as pharmacy, veterinary medicine and nursing. Comprehensive information on drug mechanisms, basic physiology and biochemistry and underlying pathophysiology of disease suitable for students from many disciplines. Clear figures to aid understanding including data figures as well as mechanistic diagrams. Key points box summaries, clinical boxes and colour coded chapters help to master difficult concepts. Emphasis on therapeutic drugs to help apply theory to practice. Over 150 questions and 12 clinical cases to test your knowledge. An enhanced eBook version is included with purchase. The eBook allows you to access all the text, figures and references with the ability to search, customise your content, make notes and highlights and have content read aloud. New chapters on drugs and the eye and the pharmacological management of headache. Revised information on biopharmaceuticals including RNA drugs, antivirals including Covid 19 therapies as well as general principles of antimicrobial therapy. A completely revised and updated chapter on lifestyle drugs. Recent advances in oxygen sensing and response to reduced oxygen tension. Expanded chapters on dementia and analgesic drugs. *Textbook of Voice & Laryngology* KK

Handa, 2017-09-30 This book is a concise guide to laryngology for clinicians. Beginning with an overview of clinical anatomy, voice assessment and imaging, the following sections cover a range of topics from swallowing, paediatric laryngology, singers and the aging voice to more complex disorders and laryngotracheal reconstruction. The text discusses the latest techniques for laryngeal documentation, key principles in the management of laryngeal disorders, outcome measures, quality of life assessment and evolving technologies. The book is enhanced by high quality clinical photographs and illustrations. Key points. Concise guide to laryngology for clinicians. Covers range of topics from basic anatomy and physiology to complex disorders and management. Includes discussion on techniques for documentation and evolving technologies. Highly illustrated with clinical photographs and diagrams. **Cervical Cancer: From Etiology to Prevention** Thomas E. Rohan, Keerti V.

Shah, 2006-04-11 The last few years have seen enormous progress in terms of our understanding of the etiology and pathogenesis of cervical cancer, particularly with respect to the role of human papillomaviruses and this has opened up new avenues for prevention. Additionally, there have been further refinements of existing technologies for cervical cancer control. To read about the state of the art on cervical cancer, health professionals have to locate individual articles and reviews of specific topics. In recognition of this, we propose to produce a book that will bring together in one place reviews of the

contribution of descriptive and analytical epidemiological research to our understanding of cervical cancer etiology as well as research on the application of that knowledge plus knowledge gained from basic science investigations to prevention through screening chemoprevention and vaccine development The proposed book will include authoritative reviews by scientists working on the disciplines that are pertinent to the topic of the epidemiology and prevention of cervical cancer
