

Exercise 8 Analysis of Human Pedigrees

Introduction:

The analysis of human pedigrees is one of the most direct ways to determine the mode of transmission for inherited traits. However, it is not always possible to reach a definitive solution because of small family sizes and the limited information available.

This exercise will help determine whether the gene governing each trait (shaded) is (a) autosomal dominant, (b) autosomal recessive, (c) X-linked dominant, (d) X-linked recessive, (e) Y-linked, (f) sexinfluenced, (g) maternally inherited through mitochondrial genes, or (h) epistatic.

1. For the pedigree below:
 - a. describe the probable mode of inheritance,
 - b. justify your answer, and
 - c. indicate the genotype of each member of the pedigree.

Mode of inheritance: **B. Autosomal Recessive**

Justification:

- Males and females have the same chance of expressing the trait
- You can only express the trait if you are homozygous
